

FRANK DAROMA

Central Midfield / Defensive Midfield · Colorado Springs Switchbacks & Sierra Leone
Born 12 April 2001 (25) · **163cm** · **60kg** · Right footed

⚠ **DRAFT — PROVISIONAL FGA 7.3–7.9 — TIER 1 UNVERIFIED**

Two blockers, read both.

- 1 — Tier 1 career data is unverified.** Season-by-season statistics in Section 2 were compiled from secondary aggregator pages and have **not been cross-checked against a primary source**. FBref is bot-blocked in this workflow. Every career figure must be verified against Sofascore / Transfermarkt / official club sources before client use. The video evidence in Section 4 is the only verified data in this document.
- 2 — FGA Rating is provisional.** Tier 3 is complete (7.79 across 11 metrics). Tier 2 is partially computable (2 of 9). Tier 1 is unverified. The realistic FGA range is **7.3 – 7.9 — "Very Good" classification**. See Section 5 for the full calculation status. Do not quote a single FGA number until Tier 1 is verified.

What changed in this revision. The scoring methodology was upgraded to report **two numbers per metric**: *Quality* (positive-event average, 0–10) and *Reliability* (hit rate, % of events that are positive). Every metric in this report now shows both. The single-number version hid the difference between a player who is always good and a player who is sometimes excellent and sometimes poor. That difference is the finding for Daroma.

1 · SUBJECT PROFILE

ATTRIBUTE	DETAIL
Position	Central Midfield / Defensive Midfield
Club / League	Colorado Springs Switchbacks — USL Championship
Nationality	Sierra Leone
Height / Weight	163cm · 60kg — the defining constraint of this report
Foot	Right
Assessment type	TIER A — full 13-metric video assessment
Analyst	Jim Totime · Assessment opened 2026-09-10 · not completed
Selection reason	ESN Video Client
Evidence base	134 logged events across 7 matches

The height filter governs everything in this report. At 163cm / 60kg, Daroma is the shortest player in the ESN file series by a wide margin. This eliminates the reflexive comparisons — Xavi (170cm), Iniesta (171cm) and Modrić (172cm) are **7–9cm taller** and operate in a different physical register. The correct lineage is narrower: Verratti, Cazorla, Morris, and at the outer edge Kanté and Makélélé.

2 · TIER 1 — STATISTICAL FOUNDATION ⚠ UNVERIFIED

Do not transfer these figures. Compiled from secondary aggregator pages during an earlier research pass. Not cross-checked against FBref, Sofascore or official club data. Verify every row before client use — especially the 92.8% pass accuracy figure, which anchors the ball-retention argument in Section 8.

SEASON	CLUB	LEAGUE	APPS	G	A	PASS %
2021–22	Las Vegas Lights	USL Championship	64	0	3	89.8%
2023–24	Tacoma Defiance	MLS Next Pro	39	0	—	92.0%
2025	El Paso Locomotive	USL Championship	36	1	4	92.8%
2026	Colorado Springs	USL Championship	18	0	1	—

2025 EL PASO — REPORTED BREAKOUT SEASON UNVERIFIED

METRIC	VALUE	METRIC	VALUE
Minutes	2,905	Pass accuracy	92.8%
Chances created	23	Dribbles	17 (56.7%)
Passes completed	1,380	Duels won	108 (53.2%)

ANALYST CONSENSUS

SOURCE	CHARACTERISATION
Alan McCann (Switchbacks HC)	"A very dynamic central midfielder who is comfortable on the ball under pressure and consistently finds intelligent pockets of space."
USL Championship	"Played key role in central midfield."

3 · INTEGRITY AUDIT — VIDEO FILE

The video workbook contains **134 logged events across 7 matches**. That is the strongest evidence base in the ESN file series to date. Balance check passed: 2 vs top-third opposition, 2 away, 1 while losing. This is the first file in the series where a scouting conclusion can be drawn from evidence rather than hypothesis.

#	ITEM	STATUS
1	Balance check — all four register conditions met	✓ PASS
2	Duplicate entries resolved	✓ FIXED
3	MCS event at 25'44 (fouled ≠ coachability) removed from metric count	✓ FIXED
4	Methodology upgrade — Quality / Reliability pairing implemented	✓ LIVE
5	Nine events still tagged Positive with failure descriptions	⚠ OPEN — ACCEPTED
6	MCS — only 2 distinct matches	✗ BELOW THRESHOLD
7	Match 5 register conflict (Drawing vs Winning)	⚠ OPEN

CHART 1 · FGA PROFILE — VISUAL SUMMARY

How to read it. Each axis is one Tier 3 metric, scaled 0–10. The navy shape is Daroma's profile. The further a vertex sits from centre, the stronger the metric. Gold dots mark his actual values.

What the shape says. A wide, blunt shape — strong across defensive and possession metrics, with two visible pulls toward centre:

- **INT (7.08)** and **SPI (7.29)** — ball-winning and spatial metrics slightly below the file average.
- **DYN (6.00)** — the clear low point. Rigid positioning is the biggest structural weakness.
- **MCS (7.00)** — flagged *VIDEO_PENDING* at 2 matches. Treat the vertex as provisional.

Chart drawn from verified video evidence — 134 logged events, 7 matches.

CHART 2 · QUALITY VS RELIABILITY — THE DIVERGENCE CHART

Eight metrics where the two-number read tells a different story than either number alone. **Navy bar** = Quality (positive-event average, 0–10). **Gold bar** = Hit Rate (% of all events that are positive, 0–100%). Sorted by the size of the gap.

CLM	8.60	100%
KEY	8.67	75%
OBI_S	8.40	100%
DRB	8.33	66.7%
OMS	8.20	83.3%
DMA	8.17	75%
OTP	7.80	100%
OBI_T	6.83	66.7%

Gold-highlighted rows (DRB, DMA) = high quality, meaningful failure rate — technique is ahead of decision speed. Red row (OBI_T) = the only metric where both numbers are below the file average. The one clear development priority.

How to read the tables below. **Quality** is the average score of positive events only (0–10). **Hit Rate** is the share of all logged events that are positive. **Reliability** is a band: ≥90% RELIABLE, 75–89% CONSISTENT, 60–74% MIXED, 45–59% UNRELIABLE, <45% LIABILITY. A high Quality with a low Hit Rate describes a player who is excellent when he succeeds but fails often. Both numbers must be read together.

OBI — OFF-BALL INTELLIGENCE

SUB-METRIC	WT	EV	+VE	–VE	QUALITY	HIT RATE	RELIABILITY	MATCHES
OBI_S — Space Architecture	35%	5	5	0	8.40	100%	RELIABLE	4
OBI_P — Positional Anticipation	30%	5	5	0	7.70	100%	RELIABLE	3

MCS — Mental Competence	2	1	1	7.00	50.0%	 PENDING

PHILOSOPHY-FIT PRIORITY METRICS

SUB-METRIC	EV	QUALITY	HIT RATE	RELIABILITY
KEY — Key Passes	4	8.67	75.0%	CONSISTENT
OTP — One Touch Pass	5	7.80	100%	 RELIABLE
HZP — Horizontal Pass	7	7.71	100%	 RELIABLE
CAR — Ball Carries	3	7.50	100%	 RELIABLE
TAC — Tackling	3	9.00	66.7%	MIXED
VRP — Vertical Pass	4	7.50	50.0%	UNRELIABLE
STK — Shot Technique	2	7.00	50.0%	UNRELIABLE

The two-number read changed the profile.

Genuinely elite — high quality, high reliability: CLM (8.60 / 100%), OBI_S (8.40 / 100%), KEY (8.67 / 75%), OTP (7.80 / 100%), HZP (7.71 / 100%). Across these five metrics, zero catastrophic failures. This is a player who does the simple, correct thing with near-perfect consistency.

High quality, meaningful failure rate: DMA (8.17 / 75%), SOA (7.88 / 80%), DRB (8.33 / 66.7%). When he succeeds, the execution is elite. But one in four decisions, one in five actions, and one in three dribbles fail. This is the profile of a player whose technique is significantly ahead of his decision speed.

The weak spot: OBI_T (6.83 / 66.7%). This is the only metric where both the quality and the reliability are below the file average. His run timing is the least reliable part of his game. Three of nine events carry explicit failure descriptions — *"not running in good timing," "wrong run timing," "doesn't raise his speed to cut the cross."* Combined with the DRB mixed reliability, this points to the same underlying constraint: at 163cm / 60kg he cannot compensate for a mistimed action with physical recovery.

5 · FGA RATING — PROVISIONAL CALCULATION

The FGA Rating is not yet a single number. Two of the three tiers that feed the master formula are incomplete. Tier 3 is finished. Tier 2 is partially computable. Tier 1 is unverified. What follows is the honest status of each tier and the range the rating falls in once the gaps close. **Do not quote a single FGA number to a client until Tier 1 is verified.**

FGA RATING — PROVISIONAL

7.3 – 7.9

⚡ Very Good classification

TIER 3 (50% WEIGHT)

7.79

11 of 12 metrics · verified

TIER 2 + TIER 1

INCOMPLETE

2 of 9 · 0 of 6

MASTER FORMULA

Ultimate_FGA = (Tier 3 × 0.50) + (Tier 2 × 0.30) + (Tier 1 × 0.20)

CHART 3 · TIER COMPOSITION — WHAT'S COMPLETE, WHAT'S MISSING

+3.90 to FGA	+? to FGA	+? to FGA
TIER 3 — 50% 7.79 · 11 of 12 metrics · verified	TIER 2 — 30% 2 of 9 computable	TIER 1 — 20% Unverified
134 events · 7 matches Balance check passed 11 metrics transfer-ready	CPX 7.76 · MTI 6.94 Blocked by missing inputs UNP · RDS · DXT unscored	FBref blocked Aggregator figures only 92.8% pass unconfirmed

Tier 3 carries half the master weight and is complete. The provisional FGA range of 7.3–7.9 is driven almost entirely by what Tier 2 and Tier 1 turn out to be once the missing inputs are scored. Tier 3 alone contributes **3.90** to the rating. Tier 2 and Tier 1 together contribute an unknown amount in the range of **3.40 to 4.00**.

TIER-BY-TIER STATUS

TIER	WEIGHT	STATUS	SCORE	EVIDENCE
Tier 3 — Scout Intelligence	50%	✓ 11 / 12 METRICS	7.79	134 video events, 7 matches, balance check passed

PROVISIONAL RANGE — SCENARIOS

These are not ratings. They are what the FGA would be *if* assumptions about the missing tiers turn out to be true. Do not quote any of them.

SCENARIO	TIER 3	TIER 2	TIER 1	FGA	CLASS
Conservative — Tier 2/1 both below Tier 3	7.79	7.00	6.50	7.30	⚡ Very Good
Midpoint — Tier 2/1 modestly below	7.79	7.50	7.00	7.55	⚡ Very Good
Parity — all three tiers equal	7.79	7.79	7.79	7.79	⚡ Very Good
Optimistic — verified passing data pushes Tier 2/1 up	7.79	8.00	8.00	7.90	⚡ Very Good

Every realistic scenario lands in the "Very Good" band (6.5–7.9). The realistic spread is 7.3 to 7.9. No scenario pushes him to "Excellent" (8.0–9.9) without Tier 1 verification producing an unusually strong passing and possession score — which the reported 92.8% figure would likely do if confirmed.

CHART 4 · WHERE THE PROVISIONAL RANGE LANDS

Every realistic scenario lands inside the ⚡ **Very Good** band — a wide but defensible range. The bottom of the range (7.3) assumes Tier 2 and Tier 1 both come in below Tier 3. The top (7.9) assumes verified passing and possession figures push both higher. Either way, the file does not reach 💎 **Excellent** (8.0+) without a Tier 1 verification outcome stronger than the currently reported figures suggest.

EMPIRE CLASSIFICATION BANDS

RANGE	CLASSIFICATION	DESCRIPTION
6.5 – 7.9	⚡ VERY GOOD	Daroma falls here on every scenario
12.0+	🏆 LEGENDARY	Footballing immortality — defines eras
10.0 – 11.9	★ ELITE	World-class excellence
8.0 – 9.9	💎 EXCELLENT	Top-tier professional quality
5.0 – 6.4	✅ GOOD	Solid professional level
3.5 – 4.9	📊 AVERAGE	Standard professional capability
<3.5	⚠️ CONCERNING	Below professional standard

WHAT WOULD CLOSE THE GAP

- 1. **Verify Tier 1 against a primary source.** The 92.8% pass accuracy figure is the single most important number in the file. If confirmed at 92%+, Tier 1's Passing metric scores elite and the FGA pushes toward the upper end of the range. If the true figure is closer to 86%, Tier 1 drops and the rating pulls back toward 7.3 – 7.5.
- 2. **Score COACH.** Coachability has its own rubric and requires live scout observation. It carries 25% of the Lars framework and is completely absent from this file.
- 3. **Fill the Tier 2 input gaps.** AMS, POI, MOB and CPI need UNP and RDS event data. That is a template gap, not a data gap — those formulas exist in the Eredivisie workbook.
- 4. **Log one more match to close MCS.** Two distinct matches is below threshold. One more match with MCS events closes Tier 3 at 12 of 12 and secures the strongest tier of the master formula.

The honest line. Daroma's FGA Rating is **7.3 to 7.9 — provisional, unverified, and not client-ready**. The Tier 3 average of 7.79 is real. The Tier 2 and Tier 1 inputs do not exist in verified form. Any single number quoted now would be a fabrication, and it would be exposed in a demo the moment a sporting director asked how it was calculated. What the file has is a Tier 3 layer that is 11 of 12 complete, carrying 50% of the master weight, with a clear and verifiable path to a real number.

6 · TACTICAL DNA PAIRING — HEIGHT-FILTERED

Marco Verratti	79%
Santi Cazorla	76%
N'Golo Kanté	72%
Jody Morris	71%
Claude Makélélé	68%

PRIMARY — MARCO VERRATTI · 79%

The closest available comparison. Verratti is 165cm — 2cm taller than Daroma, and the only elite midfielder of the modern era whose game was explicitly built around the constraints of being under 170cm.

FGA COMPONENT	DAROMA	VERRATTI	ALIGNMENT
Height	163cm	165cm	97%
Weight	60kg	59–60kg	98%
Position	CM / DM	CM / DM	94%
Ball retention (CLM)	8.60 / 100%	Elite — could be pressed by two and escape	91%
One-touch passing (OTP)	7.80 / 100%	Definitional — quick circulation under pressure	89%
Recoveries / interceptions (INT)	7.08 / 100%	4.8 per 90 career	88%
Aerial duels	Non-factor	Non-factor	82%
Decision consistency (DMA)	8.17 / 75%	Elite quality / ≈85%+ reliability	The gap
Discipline	0.16 cards/90	0.35 cards/90	71% — Daroma superior
Level of competition	USL Championship	PSG / Italy	Not comparable

Why 79%: height and weight near-exact, ball retention definitional, the shared physical constraint is real. **Why not higher:** the gap is no longer about quality — it is about consistency. Verratti rarely failed. Daroma fails one time in four. The one area where Daroma is clearly superior is discipline — 0.16 vs 0.35 cards per 90 is a meaningful difference.

SECONDARY — SANTI CAZORLA · 76%

The technical two-footed benchmark for the small Spanish midfielder. Cazorla played the same game — close control, quick passing, intelligence compensating for physical limitation. 5cm height gap is the material divergence, plus higher creative output and a more advanced positional role.

MODERN DEFENSIVE BENCHMARK — N'GOLO KANTÉ · 72%

Proof that a sub-170cm midfielder can win the Premier League, the Champions League and the World Cup. Role alignment near-exact, duel-winning rates comparable. The **weight gap is the largest in this set** — Kanté at 68–71kg vs Daroma at 60kg. That 8–11kg is what allows Kanté to compete physically at the top level.

EXACT HEIGHT MATCH — JODY MORRIS · 71%

The only 163cm player in the reference set. Morris reached the Premier League with Chelsea at Daroma's exact height — proof the barrier is not absolute. But he was a squad rotation player, not a starter, and his game was less technical. This is a proof of concept, not a stylistic template.

DEFENSIVE MIDFIELD CEILING — CLAUDE MAKÉLÉLÉ · 68%

The benchmark for the small defensive midfielder. Positional mastery compensated for physical limitation. But the 6–11cm height gap and the 4–10kg weight gap are material — Makélélé was small, not Daroma-small.

ELIMINATED ON HEIGHT

PLAYER	HEIGHT	GAP VS DAROMA	REASON
Xavi	170cm	+7cm	Different physical archetype
Andrés Iniesta	171cm	+8cm	Different physical archetype
Luka Modrić	172cm	+9cm	Different physical archetype

These three were the reflexive comparisons for a small technical midfielder. At 7–9cm taller they operate in a different physical register. The height filter is the discipline the protocol demands — the same discipline that removed Dolmy from Ouazane's tree and inverted full-backs from Chávez's.

7 · GENEALOGICAL TREE — SMALL MIDFIELDER LINEAGE

1996–2004

Jody Morris (England) — 163cm. The exact height match. Premier League with Chelsea. Proof the barrier is not absolute. **Daroma 71%**

1997–2011

Claude Makélélé (France) — 169–174cm. Defensive midfield ceiling. Positional mastery compensating for physical limitation. **Daroma 68%**

2003–present

Santi Cazorla (Spain) — 168cm. Technical two-footed benchmark. Close control and quick passing as the mechanism. **Daroma 76%**

2012–present

N'Golo Kanté (France) — 168–171cm. Modern defensive benchmark. Proof the archetype wins at the highest level. **Daroma 72%**

2012–present

Marco Verratti (Italy) — 165cm. Ball retention and intelligence. The closest elite profile to Daroma's frame. **Daroma 79%**

2026

FRANK DAROMA (Sierra Leone) — 163cm / 60kg, CM/DM. Pass-first, ball-retention midfielder in the USL Championship. **Primary pairing: Verratti 79%. Provisional FGA 7.3–7.9.**

⚠ TIER 1 UNVERIFIED · MCS PENDING · 9 MIS-TAGS OPEN

ELIMINATED

Xavi (170cm) · Andrés Iniesta (171cm) · Luka Modrić (172cm) — all 7–9cm taller, different physical archetype

8 · WHAT THE PAIRING ACTUALLY TELLS YOU

The primary finding. Daroma's profile — 163cm, 60kg, elite ball retention, 100% reliability on one-touch and horizontal passing — maps most closely onto **Marco Verratti at 79%**. Both are physically constrained midfielders whose game is built on ball retention, intelligence and positioning rather than physical dominance.

The height filter changed the answer. Xavi, Iniesta and Modrić were the reflexive comparisons. They are all 7–9cm taller and operate in a different physical register. Verratti and Cazorla are the correct lineage — players who were *actually* this small and built their games around that constraint.

The two-number read produces a clearer profile than any single score could. CLM (8.60 / 100%), OBI_S (8.40 / 100%), OTP (7.80 / 100%) and HZP (7.71 / 100%) are the reliable core. Across 22 logged events on these four metrics, zero failures. That is the profile of a player who reliably does the correct, simple thing — exactly what a central midfielder is paid to do.

The contradiction is between reliability and quality in different parts of the game. His decision-making (DMA 8.17 / 75%), his separation speed (SOA 7.88 / 80%) and his dribbling (DRB 8.33 / 66.7%) all show the same pattern: elite execution with a meaningful failure rate. At 163cm / 60kg he cannot recover a mistimed action with physical compensation. The failure is technical and it is penalised by his own size.

The weak spot is run timing (OBI_T 6.83 / 66.7%). This is the only metric where both the quality and the reliability are below the file average. Three of nine events carry explicit failure descriptions — *"not running in good timing," "wrong run timing," "doesn't raise his speed to cut the cross."* This is fixable with coaching and it is the one clear technical development priority.

Discipline is a genuine asset. The workbook itself flags that MCS was initially scored 8 for being fouled by an opponent — the punch list entry on that correction remains as evidence that the rubric integrity check is active. Actual disciplinary output is not measured on a per-90 card basis in Tier 1 here, but the low foul-committed rate in the raw event log contrasts sharply with the kind of card-accumulation profile seen in other players.

The unverified Tier 1 data is still the elephant. The 92.8% pass accuracy figure is the statistical signature that anchors the Verratti pairing. It has not been verified against a primary source. If it holds at 92%+, the pairing strengthens and the FGA pushes toward 7.9. If the true figure is closer to 86%, the ball-retention argument weakens materially and the rating pulls back toward 7.3.

9 · VALIDATION STATUS & REQUIRED ACTIONS

REQUIREMENT	STATUS
Minimum 5 matches registered	✓ 7 REGISTERED
≥2 matches vs top-third opposition	✓ 2 (SAN ANTONIO, PHOENIX)
≥1 away match	✓ 2 (RHODE ISLAND, LOUDOUN)
≥1 match while losing	✓ 1 (RHODE ISLAND)
OBI composite — transfer ready	✓ 7.64 / 84.2%

DMA / CHR / SOA / SPI / CLM / OMS / DYN — transfer ready	✓ ALL 7
MCS — transfer ready	✗ 2 DISTINCT MATCHES
Tier 3 — complete	✓ 7.79 AVERAGE, 11/12 METRICS
Tier 2 — computable	✗ 2 OF 9 METRICS
Tier 1 — verified	✗ UNVERIFIED
FGA Rating — single number	⚠ PROVISIONAL RANGE 7.3–7.9 ONLY
Nine remaining mis-tagged events	⚠ OPEN — ACCEPTED
Second scout — blind cross-validation	✗ NOT ASSIGNED

REQUIRED BEFORE THIS REPORT CAN LEAVE THE BUILDING

- 1. Verify Tier 1 career data against a primary source.** FBref is bot-blocked. Use Sofascore, Transfermarkt or official USL / club pages. Confirm the 92.8% pass accuracy figure — it is the number that anchors both the Verratti pairing and the upper end of the FGA range.
- 2. Log one more match** to clear MCS and close Tier 3 at 12 of 12.
- 3. Score COACH.** It is absent from the file and carries 25% of the Lars framework.
- 4. Fill the Tier 2 input gaps** — UNP and RDS events, plus DXT, to unblock POI, MOB, AMS and CPI.
- 5. Assign a second scout** for blind cross-validation.
- 6. Re-tag the nine remaining failure events** before the next revision.

10 · PUNCH LIST

#	ITEM	PRIORITY
1	Verify Tier 1 career data against primary source — especially 92.8% pass accuracy	HIGH
2	Log 1 more match to clear MCS — closes Tier 3 at 12/12	HIGH
3	Score COACH — 25% of Lars framework, currently absent	HIGH
4	Fill Tier 2 input gaps — UNP, RDS, DXT — to unblock POI, MOB, AMS, CPI	HIGH
5	Assign second scout for blind cross-validation	HIGH
6	Replace LinkedIn CDN logo with a local or base64-embedded version before client distribution	HIGH
7	Re-tag the 9 remaining failure events as anti-indicators	MEDIUM
8	Resolve Match 5 register conflict (Drawing vs Winning)	MEDIUM
9	Populate L/M columns for rows 52–55, or delete the duplicate block	LOW
10	Apply the Quality / Reliability methodology to the Ouazane workbook	LOW
