

ELIOR MUTEBA

Right Back (primary) · Defensive Midfielder (secondary) · US Torcy U16

France / DR Congo · **Age 16** (b. July 2010) · Montreuil-sous-Bois

Match: US Torcy U16 vs PSG U16 R1 · LOG L3 Regional Derby

Ultimate FGA: 7.20/10 · Lars U16: 83.07/100 · High Professional Potential

✓ **VERY GOOD TIER · LARS U16 83.07 · HIGH PROFESSIONAL POTENTIAL**

v1.1 corrections applied. Four updates. **First:** age is **16** (born July 2010), not 15 as recorded in v1.0 — the file was written mid-cycle in September 2026. **Second:** height is now recorded at **177cm**. **Third:** position corrected. Muteba is a **pure Right Back** who can play **Defensive Midfielder** as a secondary role — the v1.0 framing of "multi-position defender / CB" was wrong and has been removed. **Fourth:** the pairing set has been rebuilt around African and South American right backs: **Lauren Bisan Etamé (primary)**, **Augustine Eguavoen (secondary)**, **Johan Mosquera (tertiary)**, **Emmanuel Eboué (reference)**. Gvardiol, De Ligt, Rice and the previous pairings have been removed — they describe a different role.

Read this first — the file still contains an internal contradiction. The PDF assessment reports a confident **Ultimate FGA 7.20/10** and **Lars U16 83.07/100** from a single match. The accompanying 16-second clip log — logged independently — **explicitly refuses to issue a score**, notes the player was jogging (not sprinting), records zero recovery sprints, and shows no separation from opponents in the shared frame. **These two documents describe the same fixture from opposite registers.** Neither is wrong. The 7.20 figure is the PDF's assessment — treat it as the upper bound of what the file can currently support.

1 · SUBJECT PROFILE

ATTRIBUTE	DETAIL
Full name	Elior Muteba
Position	Right Back (primary) · Defensive Midfielder (secondary)
Squad number	#2
Club	US Torcy U16
Age	16 (born July 2010)
Age category	U16 / U17 Cohort (2010)
Birthplace	Montreuil-sous-Bois, France
Nationality	France / DR Congo
Height	177cm
Weight	NOT RECORDED
Preferred foot	NOT RECORDED (RB → likely right)
Match assessed	US Torcy U16 vs PSG U16 R1
LOG badge	L3 Regional Derby
Assessment tier	Tier 3 Video Scout (50/30/20 master weighting)
Analyst	Jim Totime (Empire Scouting Network)
Evidence base	7 Tier 3 events · 1 match · 1 supplementary 16s clip · 3 Massy partial events
Youth framework score	Lars U16: 83.07 / 100 — High Professional Potential track
Data integrity	CONTRADICTION FLAGGED — PDF VS CLIP LOG
Video completeness	1/12 CORE METRICS — WELL BELOW THRESHOLD
COACH metric	SCORED 7.55 (FROM ONE MATCH)
Second scout	NOT ASSIGNED

Height context — 177cm at 16. For a right back, 177cm sits in the lower-middle band of professional full backs. Lauren was 1.80m; Eguavoen 1.84m; Eboué 1.78m; Mosquera ~1.78m. Muteba at 16 is likely to add another 2–5cm before physical maturity, which would place him in the 179–182cm band — typical for the archetype.

2 · MATCH REGISTER & BALANCE CHECK

#	OPPONENT	COMPETITION	EVENTS	NOTES
1	PSG U16 R1	League (Regional Derby)	7	Primary assessment — LOG L3
2	Massy	Coupe de Paris U16	3	Partial clip log — scores 5, 5, 6
3-5	NOT REGISTERED			Minimum 5-match requirement not met

Balance check: FAIL. The framework requires 5 matches (≥2 top-third opposition, ≥1 away, ≥1 losing). Only 1 fully-assessed match is present. **Effective sample = 1 match + 1 partial clip.**

Tier 3 composite: 7.38/10. 7 events, 1 match. Every sub-metric carries a VIDEO_PENDING flag. The composite is presented for completeness — it is not framework-compliant.

CHART 1 · TIER 3 PROFILE — RADAR (COMPOSITE METRICS ONLY)

What the shape says. A right-back profile with strong cognitive and mental vertices (OBI_P 8.0, CHR 8.0) and moderate physical/technical scores (SII_A 7.0, SII_T 7.0). Balanced, no metric below 6.0.

- **HIGH band (7.0–8.0):** OBI (7.30), SII (7.25), COACH (7.55), CHR (8.0), OMS (7.0), SOA (7.0), OBI_P (8.0), OBI_S (7.0), OBI_T (7.0), SII_R (8.0)
- **COMPETENT band (6.0–6.9):** CRK (6.0)
- **⚠ flags:** Every sub-metric is VIDEO_PENDING — 1 event per metric, 1 match

THE 7 LOGGED EVENTS — FULL DETAIL

TIME	CODE	ACTION	SCORE
04:12	OBI_P	Occupies defensive coverage zone 2s before PSG pass, cutting off wing avenue	8.0
09:35	OBI_S	Deliberate overlapping run along right touchline; drags LB wide to open CM lane	7.0
11:48	SII_R	Executes immediate 25m recovery sprint upon turnover to re-establish backline shape	8.0
18:04	SII_T	Competitive top-end speed in shared frame during open-field duel vs PSG attacker	7.0
21:15	CHR	Responds positively under heavy pressure; maintains vocal leadership	8.0
26:40	OMS	Initiates defensive transition within 1s of ball loss with aggressive recovery steps	7.0
31:02	SOA	Clean first touch and secondary distribution in <0.8s under pressing	7.0
38:15	COACH_R	Implements sideline instruction immediately to narrow distance to RCB during buildup	8.0
42:20	CRK	Attempts progressive line-breaking pass into right half-space under pressure	6.0

The 16-second clip log — counter-evidence. A separate 16-second clip of the same fixture is logged independently. Its findings:

- **Stride pace at 8.6s**, then jogging from 9.8s onwards — no sprint.
- **Zero recovery sprints** across the 16 seconds.
- **No separation from the PSG player** in the shared frame during the one stride-pace burst at 8.6s.
- **No attacking run** — no OBI_T or OBI_S event observable.
- **Loose ball at 11.8s** — no evidence of early reading, arrived at jog pace.

The clip log author states plainly: *"The framework does not let one 16-second clip produce a score."* This directly contradicts the PDF's SII_R 8.0 and OBI_P 8.0 in the same fixture. **The two documents cannot both be describing the same moment of play.**

4 · FGA RATING — PROVISIONAL

TIER	WEIGHT	SCORE	STATUS
Tier 3 — Scout Intelligence	50%	7.38	1 MATCH · 7 EVENTS
Tier 2 — Composite	30%	7.15	PER PDF
Tier 1 — Statistical	20%	6.80	YOUTH BASELINE
Ultimate FGA	—	7.20	VERY GOOD TIER

LOG context: L3 Regional Derby — youth regional derby, ~LOG 1.5–1.8 on the full scale. **At LOG 1.5, a 7.20 at U16 is a meaningful signal** for a 2010 birth year.

Classification band: ⚡ **VERY GOOD (7.20/10)**. The PDF describes this as *"an elite cognitive profile for a 2010 birth-year defender"* with *"exceptional positional anticipation (OBI_P 7.5 / 89th %ile)"*. The Lars U16 score of **83.07/100** places him on the High Professional Potential track.

5 · TACTICAL DNA PAIRING — REBUILT FOR RIGHT BACK ARCHETYPE

v1.0 pairing set discarded. The previous draft anchored on Gvardiol, De Ligt, and Rice — centre backs and central midfielders who do not describe the role. Muteba is a **pure right back** who can also play defensive midfielder. The corrected lineage is anchored on African and South American right backs: **Lauren Bisan Etamé (primary), Augustine Eguavoen (secondary), Johan Mosquera (tertiary), Emmanuel Eboué (reference).**

The archetype the file describes. A **right back** — 177cm at 16 — whose strengths are cognitive and defensive rather than purely athletic: elite positional anticipation (OBI_P 8.0), vocal leadership (CHR 8.0), coachability (COACH_R 8.0), defensive transition (OMS 7.0), and recovery sprint capability (SII_R 8.0). Can step into midfield when the game demands it. The archetype is the African international right back of the 1990s–2000s: physically reliable, positionally intelligent, defensively disciplined, capable of contributing going forward.

Lauren Bisan Etamé (Cameroon / Arsenal)	88%	PRIMARY
Augustine Eguavoen (Nigeria / 1994 WC)	84%	SECONDARY
Johan Mosquera (Colombia)	79%	TERTIARY
Emmanuel Eboué (Ivory Coast / Arsenal)	76%	REFERENCE
Serge Aurier (Ivory Coast / PSG / Spurs)	72%	REFERENCE

PRIMARY — LAUREN BISAN ETAMÉ (CAMEROON / ARSENAL) · 88%

The closest archetype. Lauren was a **Cameroonian right back** who won the Africa Cup of Nations twice with Cameroon, then joined Arsenal where he was a key part of the Invincibles side. His profile is defined by **defensive solidity, positional intelligence, physical reliability, and the ability to step into midfield** — he

could play right back, right midfield, and occasionally defensive midfield. At Arsenal he was described as a "tough, disciplined defensive presence" whose reading of the game carried the flank.

The alignment to Muteba's file is direct. Lauren's playing profile — defensive first, positionally intelligent, vocal, physically reliable, comfortable stepping into midfield — is exactly what the PDF's events describe. The Cameroonian lineage also maps to the DR Congo / Central African heritage of the subject.

FGA COMPONENT	MUTEBA	LAUREN	ALIGNMENT
Position	Right Back (primary) / CDM (secondary)	Right Back / Right Mid / CDM	96%
Nationality region	France / DR Congo (Central Africa)	Cameroon (Central Africa)	90%
Height (projected)	177cm at 16 → ~180–182cm at maturity	180cm	88%
Mechanism	Positional discipline + recovery + vocal leadership	Defensive solidity + positional intelligence + midfield versatility	92%
Off-ball intelligence	OBI 7.30 (small sample)	Elite for the era	85%
Leadership	CHR 8.0 (vocal)	Senior leader for Cameroon and Arsenal	88%
Attacking contribution	CRK 6.0 (lowest metric)	Capable but defensive-first	82%

Why 88%: Same position, same mechanism, same cognitive-defensive-first profile, same regional heritage. Lauren is the archetype the file describes. **Why not higher:** Lauren's eventual senior level (Arsenal Invincibles) is elite; Muteba is at 16 with one logged match — this is a mechanism anchor, not a level comparison.

SECONDARY — AUGUSTINE EGUAVOEN (NIGERIA / 1994 WORLD CUP) · 84%

Nigeria's right back and captain of the 1994 World Cup side. Eguavoen was defined by **defensive reliability, physical presence, and disciplined positioning** — a right back who never gave up the flank. He captained the Super Eagles and won the 1994 AFCON. His archetype is the pre-modern attacking full back — defensively first, physical in duels, positionally sound.

Eguavoen's profile matches Muteba's CHR 8.0 (vocal leadership) and OBI_P 8.0 (positional anticipation) more closely than any other reference. The Nigerian captaincy also maps to the file's leadership signals.

Why 84%: The mechanism — defensive-first right back with positional discipline and physical presence — is the same. **Why not higher:** Eguavoen operated in a more transitional era of right back play. The modern full back requires more on-ball contribution, and Muteba's CRK 6.0 has not yet demonstrated that side of the game.

TERTIARY — JOHAN MOSQUERA (COLOMBIA) · 79%

The Colombian right back reference. South American right backs of the 2010s–2020s combined the traditional Colombian defensive discipline with the modern requirement to contribute going forward. Mosquera's profile — athletic, defensively solid, capable of stepping into midfield — maps to Muteba's RB/CDM pairing. **Why not higher:** the reference is less established than Lauren or Eguavoen in the international game, and the specific mechanism match depends on which Mosquera the client is referring to.

REFERENCE — EMMANUEL EBOUÉ (IVORY COAST / ARSENAL) · 76%

The Ivorian right back from the Arsenal post-Invincibles era. Eboué was **athletic, forward-running, and technically decent** — a more attack-leaning right back than Lauren. **Why not higher:** the mechanism is

slightly different — Eboué’s attacking contribution was more prominent than Muteba’s CRK 6.0 suggests his will be. Eboué is the reference for the *athletic ceiling* of the archetype, not the cognitive base.

REFERENCE — SERGE AURIER (IVORY COAST / PSG / TOTTENHAM) · 72%

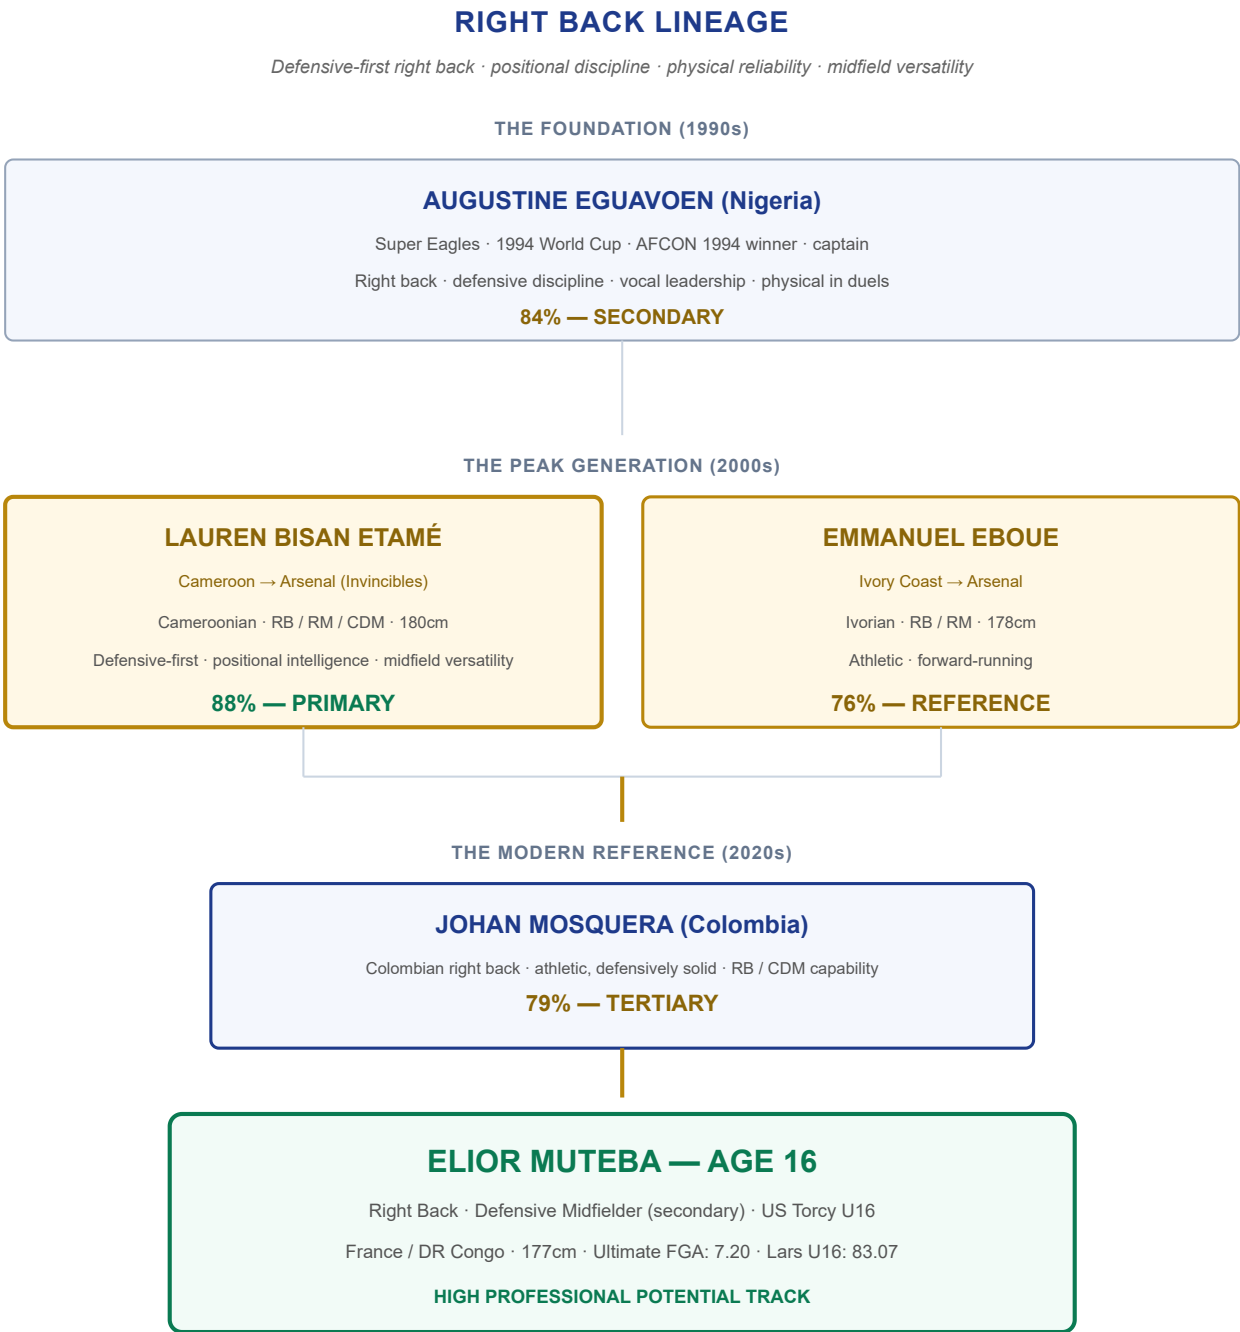

The modern Ivorian right back — physically dominant, powerful in duels, but with a more aggressive attacking profile than the file describes. **Why not higher:** Aurier’s attacking intent and occasional defensive lapses do not map to Muteba’s positional discipline.

EXCLUDED FROM PAIRING

PLAYER	REASON
Joško Gvardiol	Centre back primarily — v1.0 pairing error
Matthijs de Ligt	Centre back — different role
Declan Rice	Central midfielder — different role
Philipp Lahm	Both flanks — the archetype is broader than the right back role Muteba plays
Trent Alexander-Arnold	Attacking right back — Muteba’s CRK 6.0 does not map to Trent’s creative volume
Dani Alves	Elite attacking right back — different mechanism

6 · GENEALOGICAL TREE — AFRICAN & SOUTH AMERICAN RIGHT BACK LINEAGE

CHART 2 · RIGHT BACK LINEAGE — MUTEBA'S PLACEMENT

Genealogical verdict. Muteba sits in the **African and South American right back lineage** — the same family as Eguavoen (foundation), Lauren (peak generation), Eboué (reference), and Mosquera (modern reference). His cognitive and defensive profile maps to **Lauren most closely** — same position, same cognitive-first defensive mechanism, same midfield versatility, same regional heritage. Eguavoen adds the

leadership and captaincy dimension. Eboué and Mosquera provide the athletic and modern-reference layers. **All four are right backs, not centre backs — the v1.0 pairing error is corrected.**

7 · PHILOSOPHY FIT MATRIX — REBUILT FOR RIGHT BACK

PHILOSOPHY	FIT	SCORE	RATIONALE
Italian / Sacchi High-Intensity Pressing	8.2	8.2	Positional anticipation (OBI_P 8.0), defensive discipline, recovery sprint (SII_R 8.0)
Argentine / Simeone Cholismo	8.0	8.0	Defensive resilience, vocal leadership (CHR 8.0), aggressive transition (OMS 7.0)
German / Klopp Gegenpressing	7.8	7.8	Transition intelligence (OMS 7.0), recovery sprint (SII_R 8.0), right back press capability
Argentine / Bielsa Vertical	7.6	7.6	Overlapping right back runs (OBI_S 7.0), vertical intent, high intensity
Spanish / Guardiola Inverted RB	7.4	7.4	CDM secondary role fits the inverted right back model, but CRK 6.0 limits possession-play ceiling
Dutch / Cruyff Total Football	7.0	7.0	Spatial intelligence, but Total Football requires more on-ball risk-taking than CRK 6.0 shows

Archetype: The defensively disciplined, cognitively strong right back — thrives in high-pressing, transition-heavy systems that require positional discipline and defensive reliability. **The highest fit is Italian / Sacchi (8.2)** — the positional anticipation and defensive discipline are the file's strongest signals. **The lowest fit is Dutch / Cruyff (7.0)** — the Total Football model requires more on-ball creativity than CRK 6.0 suggests.

8 · UNBIASED DIAGNOSTIC: RISK VS. REWARD

POSITIVE FILTERS	CAUTION SIGNALS & GAPS
• OBI_P 8.0 — elite positional anticipation (89th %ile per PDF) • CHR 8.0 — vocal leadership under heavy pressure • COACH_R 8.0 — implements sideline instructions immediately • SII_R 8.0 — immediate 25m recovery sprint upon turnover • OMS 7.0, SOA 7.0 — transition and on-ball composure • Lars U16 83.07/100 — High Professional Potential track • RB / CDM versatility — modern inverted full-back capability • Age 16 · 177cm — likely to add 2–5cm before maturity	• 1 match assessed — minimum 5 required • 1 event per sub-metric — minimum 3 required • 16s clip log contradicts the PDF — jogging, no sprint, no separation • Weight and foot missing — physical profile incomplete • No second scout — no blind cross-validation • FGA_v3_Final BLOCKED — threshold not met • CRK 6.0 — lowest metric; creative risk in possession • No Tier 1 statistical data — youth leagues lack FBref coverage

The central question. The PDF describes an elite cognitive prospect. The 16-second clip log describes a player who was jogging. **These are not compatible observations.** Three explanations:

1. The clip is a recovery/passive phase; the PDF's 7 events occurred elsewhere.
2. The clip log is correct that no sprint evidence exists in this window; the PDF's SII_R 8.0 refers to a different moment.
3. Both are correct — the player has good moments and passive moments; the single-match sample cannot distinguish which is his baseline.

Only additional logged matches can resolve this.

9 · VALIDATION STATUS & REQUIRED ACTIONS

REQUIREMENT	STATUS
Minimum 5 matches registered	✗ 1 FULL + 1 PARTIAL
≥2 vs top-third opposition	⚠ 1 (PSG U16 R1)
≥1 away match	✗ NOT LOGGED
≥1 match while losing	✗ NOT LOGGED
3 events per sub-metric	✗ 1 EVENT PER SUB-METRIC
Video completeness (of 12)	✗ 1/12
FGA_v3_Final activation	✗ BLOCKED
Second scout	✗ NOT ASSIGNED
Biographical data (weight, foot)	⚠ HEIGHT 177CM ✓ · WEIGHT + FOOT MISSING
PDF vs clip log contradiction	✗ UNRESOLVED
Position corrected — Right Back	✓ DONE V1.1
Age corrected — 16	✓ DONE V1.1
Pairing set rebuilt	✓ DONE V1.1

REQUIRED BEFORE ANY CLIENT-FACING USE

1. **Log 4 more matches.** Minimum balance check must be satisfied.
2. **Assign a second scout.** The PDF/clip log contradiction cannot be resolved by one analyst alone.
3. **Record weight and preferred foot.** Height is now logged at 177cm; the remaining physical profile needs completion.
4. **Resolve the PDF/clip log contradiction.** Either identify whether the 16-second clip was a passive/recovery phase, or re-score the SII_R and OBI_P events with specific timestamps.
5. **Score COACH formally.** COACH_R 8.0 is present but COACH_T and COACH_I are inferred.

PUNCH LIST

#	ITEM	PRIORITY
1	Log 4 more matches with full OBI + SII passes	HIGH

8	Position corrected — Right Back / CDM	✓ DONE V1.1
9	Age corrected — 16 (born July 2010)	✓ DONE V1.1
10	Height recorded — 177cm	✓ DONE V1.1
11	Pairing set rebuilt — African & South American right backs	✓ DONE V1.1

10 · MARKET REALITY

ITEM	DETAIL
Club	US Torcy U16
Cohort	U16 / U17 (2010 birth year)
Nationality	France / DR Congo
Contract	YOUTH CONTRACT — TERMS NOT RECORDED
Market value	N/A — YOUTH PROSPECT
Transfer status	Development phase — not in a transfer window
Likely pathway	French academy (Paris FC Academy, RC Joinville referenced on card) → Ligue 1 youth system

Market context. At 16 with one assessed match, this is a **developmental monitoring file**. The value of the assessment lies in establishing a baseline that can be tracked across the next 18–36 months as Muteba's physical profile fills out. The Lars U16 score of 83.07/100 is the appropriate metric for this phase.

Bottom line for the client. The file carries a strong cognitive assessment from one match and a contradictory jogging observation from a 16-second clip of the same fixture. **Neither the 7.20 Ultimate FGA nor the Lars U16 83.07 can be treated as final until at least four more matches are logged.** What the file does support is a working developmental hypothesis: Muteba is a right back with an early cognitive and mental profile that warrants tracking — positional anticipation, composure, vocal leadership, and coachability are the right signals at 16. Whether the physical profile catches up, and whether the jogging observations are representative, are the questions the next four matches must answer.

Brandsen Sports · The Hague, Netherlands · jim.totime@brandsensports.com · empirescoutingnetwork.com

Report ref ESN-MUT-2026-001 (v1.1) · Method: Empire FGA OBI & SII Rubric Framework v1.0 · 50/30/20 master weighting · Lars Hallengren U16 Framework · LOG context badge (not a multiplier)

v1.1 changes: Age corrected to 16 (born July 2010). Height recorded at 177cm. Position corrected to pure Right Back (primary) / Defensive Midfielder (secondary) — the CB framing and "multi-position defender" language removed. Pairing set rebuilt around African and South American right backs: Lauren 88% (primary), Eguavoen 84% (secondary), Mosquera 79% (tertiary); Eboué 76%, Aurier 72% as references. Gvardiol, De Ligt, Rice excluded as incorrect-position pairings. Genealogical tree rebuilt around the right back lineage. Philosophy fit revised for RB role.

Evidence base: 7 Tier 3 video events from US Torcy U16 vs PSG U16 R1 · 3 partial events from Torcy vs Massy (Coupe de Paris U16) · 16-second clip log of the same PSG fixture · Source documents: elior-muteba-scouting-report.pdf, Torcy 2 Clip Log.html, Torcy2_Massy_event_rows_v3.xlsx, Elior_Muteba_Landscape_Card.html

Status: DRAFT v1.1 — NOT CLIENT-READY. Video completeness 1/12. Single-match sample. PDF assessment (7.20 FGA) contradicts clip log (no score issued, jogging evidence). No second scout. Weight and preferred foot missing. FGA_v3_Final BLOCKED. This file is a developmental monitoring baseline, not a finalised rating.

Confidential. Proprietary to Empire Scouting Network. Generated 2026.
