SINGLE-MATCH FOCUS

LEE SEUNG-WOO

이승우 · Left Winger / Attacking Midfielder · Jeonbuk Hyundai Motors
K League 1 · 28 years old · 170cm / 63kg · Right footed

⚠ DRAFT — SINGLE MATCH · FGA PROVISIONAL 6.8–7.5

What this file is. A targeted single-match assessment of Lee Seung-Woo's match-winning performance in the Jeonbuk Hyundai Motors 2–0 Ulsan HD derby on 27 September 2026. The Tier 3 evidence is a complete 11-event log covering his 82' substitute appearance through the 90+3' badge celebration. **Mean quality across those 11 events: 9.05/10 — the highest single-match average in the ESN file series.** Tier 1 is fully populated across 10 seasons and 5 clubs.

Three blockers before client delivery.

1 — Single match only. The 9.05 average describes an 11-minute sequence at the peak of his season. It is not a season-long assessment. Multi-match logging is required before any FGA rating is finalised.

2 — COACH not scored. 25% of the Lars framework. Requires live scout observation.

3 — No second scout. No blind cross-validation has been conducted.

1 · SUBJECT PROFILE

ATTRIBUTE	DETAIL
Full name	Lee Seung-Woo (이승우)
Position	Left Winger / Attacking Midfielder
Club	Jeonbuk Hyundai Motors
League	K League 1 · LOG 2.7
Age	28 (b. 6 January 1998)
Height / Weight	170–173cm / 63–65kg
Foot	Right (confident on left)
Squad number	10
Contract	Until 2028
Youth background	FC Barcelona La Masia (2010–2016)
Selection reason	ESN Video Client · single-match assessment
Evidence base	11 scored events · 1 match · Tier 1 full career data
Analyst	Jim Totime

The La Masia context. Lee Seung-Woo was the "Korean Messi" — top scorer at the 2010 Danone Nations Cup, signed by Barcelona at 12, banned by FIFA from playing for the club between 2013 and 2016 due to transfer violations. He never played a competitive first-team match for Barcelona. The European career — Verona, Sint-Truiden, Portimonense — did not materialise. **The physical profile of European football did not suit a player whose game was built on avoiding contact.** The K League revival is real: 34 goals in 68.7 90s at Suwon FC, now Jeonbuk's top scorer in 2026.

2 · TIER 1 — STATISTICAL FOUNDATION

20% WEIGHT

CAREER SUMMARY — 10 SEASONS · 5 CLUBS · 5 LEAGUES

PERIOD	CLUB	LEAGUE	APPS	GOALS	ASSISTS	G+A/90
2017–2019	Hellas Verona	Serie A / B	37	2	1	0.14
2019–2021	Sint-Truiden	First Division A	17	2	0	0.21
2020–2021	Portimonense	Primeira Liga	4	0	0	0.00
2022–2024	Suwon FC	K League 1	88	34	8	0.61
2024–	Jeonbuk	K League 1	66	14	10	0.73
Career total	5 clubs	5 leagues	212	52	19	0.53

2026 SEASON — JEONBUK · K LEAGUE 1

METRIC	VALUE	PER 90
Matches	29	—
Starts	14	—
Minutes	1,701	18.9 90s

PPM (when playing)	1.52	—
On-Off differential	+0.24	Positive

CHART 1 · CAREER ARC — EUROPE VS K LEAGUE

What the chart shows. The European career (Verona, Sint-Truiden, Portimonense) produced a combined G+A/90 of 0.14 to 0.21 — no meaningful attacking output. The K League career (Suwon, Jeonbuk) produced 0.61 to 0.73. **The gap is the story.** The mechanism that failed in Europe is the same mechanism that produces at a high rate in Korea. The question any club would ask: is this a level effect or a system effect?

CHART 2 · 2026 SHOOTING FUNNEL — THE CURLING RIGHT FOOT

SHOOTING FUNNEL

SoT% 37.2% — above K League average
G/SoT 0.50 — elite conversion when on frame
Signature: right-foot curling shot from left side of the box

FOUL RATIO

1.6 : 1
At 170cm and 63kg, defenders cannot stop him legally in tight spaces.
Fouls drawn per 90: 1.90.

SYSTEM IMPACT

Jeonbuk perform better with him on the pitch
Not a luxury player — improves the team despite limited starting minutes (14 starts in 29 matches).

3 · TIER 3 — SINGLE-MATCH EVENT LOG 50% WEIGHT

MEAN QUALITY SCORE

9.05

Highest in ESN series

EVENTS LOGGED

11

Complete match action sequence

MATCHES LOGGED

1 / 5

Single-match focus

Match context. Jeonbuk Hyundai Motors 2–0 Ulsan HD · K League 1 Derby · 27 September 2026. The 100th Hyundai Derby. Jeonbuk were leading 1–0. Lee Seung-Woo entered as a late super-sub at 82'. He scored the decisive goal at 90+2' to seal a 2–0 win — Jeonbuk's first opening derby win in 5+ years. The 11-event log captures the complete match action sequence.

CHART 3 · THE MATCH-WINNING SEQUENCE — 82' TO 90+3'

MEAN QUALITY: 9.05 / 10

A complete attacking-midfielder action sequence, executed at elite level in the 90th minute of a derby. The 11 metrics cover: mental preparation (MCS),

EVENT LOG — DETAIL

#	TIME	CODE	ACTION	SCORE
1	82'	MCS	Entered as late super-sub in high-intensity derby pressure, capitalising on squad depth	8.5
2	90+1'	OBI_P	Anticipated Ulsan's rest-defence breakdown, timing central run into space	8.5
3	90+1'	OMS	Executed rapid defence-to-attack transition as Jeonbuk broke out	8.5
4	90+2'	CAR	Controlled transition pass in stride and carried ball directly into 18-yard box	9.0
5	90+2'	SOA	Processed defender momentum and goalkeeper positioning in milliseconds at full sprint	9.0
6	90+2'	DRB	Executed agile multi-touch footwork inside tight box space	9.5
7	90+2'	CRK	Unlocked congested penalty area using high-level creative agility and trickery	9.0
8	90+2'	DMA	Selected optimal low-risk rolling trajectory rather than a rushed power shot	9.5
9	90+2'	STK	Applied clean ball-striking, rolling ball smoothly past keeper	9.5
10	90+2'	FIN	Converted high-stakes 1v1 to make it 2–0 and seal Jeonbuk's first opening derby win in 5+ years	9.5
11	90+3'	CHR	Displayed emotional leadership, pointing directly to the Jeonbuk badge	9.0
Mean Quality Score				9.05

CHART 4 · SINGLE-MATCH FGA PROFILE — RADAR (11 METRICS FROM THE 82'–90+3' SEQUENCE)

How to read the shape. Each axis is one metric, 0–10. The navy polygon is Lee Seung-Woo's single-match profile.

What the shape says. This is not a rounded profile. It is a *saturated* one — every vertex sits between 8.5 and 9.5.

- **Peak cluster (9.5):** DRB, DMA, STK, FIN. The four metrics of the finish itself.
- **Strong block (9.0):** CAR, SOA, CRK, CHR. Ball progression, processing, creativity, character.
- **Base (8.5):** MCS, OBI_P, OMS. Mental preparation, spatial reading, transition recognition.

***Caveat.** This radar describes one 11-minute sequence. It is the peak, not the baseline. The shape it describes — a complete attacking midfielder's action sequence executed at elite level — is the ceiling this player has demonstrated. A season-long average would produce a different shape.*

4 · FGA RATING — PROVISIONAL

FGA — PROVISIONAL RANGE

6.8 – 7.5

⚡ Very Good · not finalised

TIER 3 — SINGLE MATCH

9.05

Peak, not baseline

TIER 1 — CAREER

7.20

Verified · 10 seasons

Tier 3 single-match (9.05) is a ceiling.

Tier 1 career data (7.20) is a floor.

The FGA rating sits between them until multi-match logging is complete.

TIER	WEIGHT	STATUS	SCORE
Tier 3 — Scout Intelligence	50%	⚠ SINGLE MATCH, 11 EVENTS	9.05 (peak)
Tier 2 — Composite Intelligence	30%	✖ NOT COMPUTABLE	—
Tier 1 — Statistical Foundation	20%	✅ VERIFIED	7.20

LOG context: K League 1 sits at approximately **LOG 2.7** in the FGA framework — below Eredivisie (2.8), above Belgium Pro League (2.6). Any absolute rating must be read against that. A 6.8–7.5 rating at LOG 2.7 is not the same as 6.8–7.5 at LOG 3.6.

Classification band: ⚡ **VERY GOOD — at K League level.** The single-match ceiling demonstrates a player who can produce at elite level in a derby. The career baseline demonstrates a player who produces at a good level week-to-week. The gap between the two is the honest question this report asks.

5 · TACTICAL DNA PAIRING

Takashi Inui	78%
Santi Cazorla	74%
Jay-Jay Okocha	71%

PRIMARY — TAKASHI INUI · 78%

The most stylistically precise comparison available. Inui is a **170cm, 63kg, right-footed left winger** whose entire career was built on the same physical adaptation — speed, agility, avoidance of duels, and a curling right-footed finish from the left half-space.

FGA COMPONENT	LEE SEUNG-WOO	INUI	ALIGNMENT
Height	170cm	170cm	100%
Weight	63kg	63kg	100%
Position	LW / AM	LW / AM	97%
Foot	Right	Right	100%
Physical profile	Avoids duels	Avoids duels	94%
Mechanism	Speed + agility + curling finish	Speed + agility + curling finish	92%
Finishing (G/SoT)	0.50–0.59	0.45–0.55	91%
European career	Failed (Serie A, Belgium)	Succeeded (La Liga, Bundesliga, Eredivisie)	54%
Career level	K League	La Liga / Bundesliga	48%

Why 78%: The physical and stylistic profile is a near-exact match. Both are 170cm, 63kg, right-footed, left-sided attackers whose game is built on the same mechanism — avoid contact, use speed and agility, finish with a curling right foot from the left half-space. Inui is the player Lee Seung-Woo *would have been* if his European career had succeeded. **Why not higher:** the mechanism was the same; the environment was not. That gap — 46 percentage points on the career-level row — is the honest divergence.

SECONDARY — SANTI CAZORLA · 74%

The technical/adaptation parallel. Cazorla is 168cm — 2cm shorter — and built a career on the same core adaptation: avoid duels, use close control and quick feet, finish with either foot.

TERTIARY — JAY-JAY OKOCHA · 71%

The flair/risk parallel. Okocha is 178cm — 8cm taller — but the mechanism overlaps in the final third: both attempt the difficult action, both are flagged for "for show" tendencies, both are at their best in tight spaces.

6 · GENEALOGICAL TREE

CHART 5 · SMALL TECHNICAL WINGER LINEAGE — THE AVOID-CONTACT ARCHETYPE

KOREAN WINGER LINEAGE: Cha Bum-kun (1970s–80s) → Son Heung-min (2010s–) → Lee Seung-Woo (2026)

7 · WHAT THE PAIRING ACTUALLY TELLS YOU

The primary finding. Lee Seung-Woo is a **170cm, 63kg, right-footed left winger** whose game is built on a specific physical adaptation — avoid duels, use speed and agility to create separation, finish with a curling right foot from the left half-space. The **Takashi Inui pairing at 78%** is the correct genealogical anchor because the mechanism is identical.

The single-match log is the peak, not the baseline. The 11-event sequence from 82' to 90+3' produced a mean quality of **9.05** — the highest single-match average in the ESN file series. But it is one match. The Tier 1 data over 10 seasons shows a **0.42 goals per 90** attacker at K League level, not an elite European winger. Both are true. The honest read is that the single-match ceiling is very high and the season-long baseline is good-but-not-elite.

The physical limitation is the career constraint. At 170cm and 63kg, Lee Seung-Woo cannot win physical duels. His game is built on *avoiding* them. That adaptation worked in the K League — 34 goals in 68.7 90s at Suwon FC is a genuinely strong record. It did not work in Serie A (4.0 90s), Belgium (9.3 90s), or Portugal (0.4

90s). The mechanism that produces goals in Korea is the same mechanism that failed in Europe. That is the central fact about this player.

The Inui comparison is the correct frame. Inui is also 170cm, 63kg, right-footed, and built his career on the same adaptation. The difference is not the mechanism — it is the environment. Inui found clubs (Eibar, Eintracht Frankfurt) that built systems around his strengths and covered his limitations. Lee Seung-Woo did not. The 78% match is a *stylistic* match, not a *career outcome* match.

The on-off differential (+0.24) and the PPM (1.52) are the practical signals. Jeonbuk performs better when he plays. He is not a luxury player, even at 14 starts in 29 matches. That is the counter-argument to any club that would say "he is too small for a starter's role" — the data says the team improves when he is on the pitch.

What would move the assessment. The single-match log is the strongest Tier 3 evidence in the file. To convert it into a full FGA rating, the same metric passes need to be run across 5+ matches with balance-checked opposition. The 9.05 single-match average is a peak. The multi-match average would be the rating.

8 · VALIDATION STATUS & REQUIRED ACTIONS

REQUIREMENT	STATUS
Minimum 5 matches logged	✗ 1 MATCH
≥2 vs top-third opposition	✗ NOT APPLICABLE
≥1 away match	✗ NOT APPLICABLE
≥1 match while losing	✗ NOT APPLICABLE
Tier 3 video assessment	⚠ 11 EVENTS, SINGLE MATCH
Tier 1 verified	✓ 10 SEASONS, 5 CLUBS
COACH metric	✗ NOT SCORED
Second scout	✗ NOT ASSIGNED
FGA_v3_Final	✗ BLOCKED

REQUIRED BEFORE CLIENT DELIVERY

- 1. Log four more matches.** The single-match sequence is elite. The question is whether it is the ceiling or the baseline. Four more balance-checked matches would answer it.
- 2. Score COACH.** Completely absent. 25% of the Lars framework.
- 3. Assign a second scout.** No pairing percentage should be finalised without blind cross-validation.
- 4. Extend the pairing set.** Inui, Cazorla and Okocha are the correct anchors. Additional small technical wingers who succeeded in Europe would strengthen the tree — Kubo, David Silva, Bernardo Silva.

PUNCH LIST

#	ITEM	PRIORITY
1	Log 4 more matches (balance-checked)	HIGH
2	Score COACH metric	HIGH
3	Second scout for blind cross-validation	HIGH
4	Replace LinkedIn CDN logo with local or base64-embedded version	HIGH
5	Extend pairing set — Kubo, Silva brothers	MEDIUM
