

SAMSON KPARDEH

Left Winger / Forward · Liberty Flames · All-Region
NCAA Division I · Sophomore · **173cm / 68kg** · **Right footed**
Worcester, Massachusetts · Jersey 10

⚠ **DRAFT V4 — TOP SPEED 19.60 MPH · FGA 7.8–8.4**

What changed in v4. GPS top speed is now converted to MPH and benchmarked against the archetype. Peak in-game top speed is **19.60 mph** (FGCU match, 8.76 m/s). Average across the 5-match sample is **19.15 mph**. That places Kpardeh in the **top half of the collegiate band but not at the elite tier** (20–22 mph). **The Mané pairing at 84% is a mechanism match, not a top-speed match** — this caveat is now stated explicitly in Section 6.

Three blockers before client delivery.

1 — Three of five matches missing from Tier 3. The FGCU brace, the Georgia Southern 9-shot game, and the American game-winner are not in the video event log.

2 — SII composite reconciliation. The stated 9.01 does not reconcile with the event table mean (9.07).

3 — COACH not scored. No second scout.

1 · SUBJECT PROFILE

ATTRIBUTE	DETAIL
Full name	Samson Kpardeh
Position	Left Winger / Forward (LW / CF)
Club / Program	Liberty Flames
Level	NCAA Division I · LOG ~1.6
Class	Sophomore
Hometown	Worcester, Massachusetts
Height / Weight	173cm / 68kg
Foot	Right
Squad number	10
Distinction	All-Region Selection
Season	2026 — 5 apps, 5 goals, 433 minutes
Evidence base	14 Tier 3 events (2 matches) · 5-match GPS · full 2026 box score

The archetype, confirmed by the goal video. In the San Diego Toreros goal, Kpardeh received the ball **on the left wing, drove inside** with the ball under control, beat his defender **by speed and ball carry** (not by feinting), and finished 1v1 against the goalkeeper. That is a **carry-based left-wing transition forward**. The pairing set in Section 6 is built around this exact action.

CHART 1 · 2026 SEASON — GOAL CONSISTENCY ACROSS 5 MATCHES

3 · GPS DATA — PHYSICAL EVIDENCE & TOP-SPEED ANALYSIS

First GPS-integrated file in the ESN series. Five matches of positional tracking. This layer verifies the physical mechanism the video shows. **Top speed is now converted to MPH and benchmarked.**

5-MATCH GPS SUMMARY — WITH MPH CONVERSION

MATCH	DISTANCE	M/MIN	HS DISTANCE	HS EFFORTS	MAX VEL (M/S)	TOP MPH
vs. SDSU	10,875	72	706	44	8.37	18.72
vs. San Diego	10,059	73	727	37	8.44	18.88
vs. FGCU	10,483	66	597	33	8.76	19.60
vs. Georgia Southern	7,022	66	456	28	8.70	19.46
vs. American	8,491	60	558	34	8.57	19.17
Average	9,386	67	608	35	8.56	19.15

Top Speed verdict: 19.60 mph peak, 19.15 mph average. This is **solid but not elite**. It places Kpardeh in the top half of the collegiate band (19–20 mph) but below the high-tier pro band (20–22 mph) and well below elite international (22+ mph). The Mané pairing in Section 6 is a *mechanism* match, not a top-speed match — see the caveat there.

CHART 2 · TOP SPEED BENCHMARK — WHERE 19.60 MPH SITS

IN-GAME TOP SPEED (MPH)

Where the number lands. Kpardeh's 19.60 mph peak sits at the top of the collegiate band — solid, but 0.40 mph below the high-tier pro threshold of 20 mph and **2.4+ mph below the elite international threshold**. At NCAA level this is a weapon. At the next level it is average.

What the GPS data actually means in context. 19.60 mph is not the number that wins the 1v1. **Acceleration wins the 1v1.** A defender starting flat-footed loses 2–3 meters in the first 10 meters regardless of top speed. Kpardeh's SII_A (explosive acceleration) at 9.0–9.5 is the real physical weapon. The 30-yard carry is completed because the defender cannot recover in time — not because Kpardeh is faster at 30 yards. Both matter, but the acceleration matters more.

Mean Quality — 14 events				9.07

CHART 3 · TIER 3 PROFILE — RADAR (11 DISTINCT METRICS)

What the shape says. A saturated polygon — every axis between 8.5 and 9.5. No structural weakness visible in the two-match sample.

- **Peak (9.5):** DRB and OBI_P. The two metrics that define the Toreros goal.
- **High (9.0–9.25):** FIN, SII_A, STK, SOA, OMS, SII_R, MCS.
- **Base (8.5–8.75):** CAR, SII_T. Still above "very good" threshold.

Caveat. Two matches. Three goal-scoring matches missing from the sample.

5 · FGA RATING — PROVISIONAL

FGA — PROVISIONAL RANGE

7.8 – 8.4

Excellent · top of band

TIER 3 — 2 MATCHES

9.07

Peak, not baseline

TIER 1 — 5 MATCHES

8.20

41.4% SoT · 41.7% G/SoT

TIER	WEIGHT	STATUS	SCORE
Tier 3 — Scout Intelligence	50%	⚠️ 14 EVENTS, 2 OF 5 MATCHES	9.07
Tier 2 — Composite	30%	❌ NOT COMPUTABLE	—
Tier 1 — Statistical Foundation	20%	✅ 5-MATCH SEASON	8.20

LOG context: NCAA Division I sits at approximately **LOG 1.6** — the lowest tier in the FGA framework.

Classification band: **EXCELLENT** — provisional. The Tier 1 shooting profile (41.4% SoT, 41.7% G/SoT, 1.04 G/90) is materially stronger than the raw conversion suggested. Scoring in every game across 5 matches is a consistency signal that separates him from the other collegiate forwards in the ESN file.

6 · TACTICAL DNA PAIRING

The mechanism, confirmed by video. Kpardeh receives **wide on the left**, drives **inside** with the ball under control, beats his defender **by speed and ball carry** (not feints), and finishes **1v1 vs the goalkeeper**. The pairing set below is built exclusively on this mechanism.

Critical caveat — mechanism match, not top-speed match. Mané's documented in-game top speed at Liverpool was in the **21–22 mph** range. Kpardeh's peak is **19.60 mph** — 1.5–2.5 mph slower. The Mané pairing at 84% is a **mechanism match** (receive wide → drive inside → carry → finish), not a **top-speed match**. Kpardeh beats collegiate defenders because he is faster than them (19.60 vs ~18.5 mph typical) and accelerates quickly — not because he is Mbappé-fast. At the next level (Championship, Eredivisie), the recovery speed of the defenders increases and this margin compresses. **Whether the carry-based mechanism holds at higher level depends on whether the acceleration and carry control compensate for the modest top-speed margin.**

Sadio Mané	84%
Kamaldeen Sulemana	78%
Bruma	76%
Cobi Jones	74%
Shaun Wright-Philips	71%
Nico Williams	68%
El Hadji Diouf	62%

PRIMARY — SADIO MANÉ · 84%

The exact mechanism. Mané's signature action at Southampton — the one that earned him the Liverpool transfer — was receiving on the left, driving inside with the ball carry, beating the defender by pace, and finishing 1v1.

FGA COMPONENT	KPARDEH	MANÉ	ALIGNMENT
Height	173cm	175cm	97%
Weight	68kg	69kg	99%
Foot	Right	Right	100%
Receive zone	Left wing	Left wing	100%
Mechanism	Carry inside at speed	Definitional	95%
Beat method	By speed + ball carries	By speed + ball carries	94%
Finish type	1v1 vs keeper	1v1 vs keeper	93%
Top speed	19.60 mph	21–22 mph	71%
Acceleration	SII_A 9.0–9.5	Elite	91%
Career level	NCAA D1	Liverpool / Bayern	Not comparable

Why 84%: Every mechanism-level component matches at 90%+. The two-way alignment on receive zone, carry method, and finish type is the strongest pairing in the file. **Why not higher:** the top-speed gap (71%) is now measured and material. Mané was genuinely faster.

SECONDARY — KAMALDEEN SULEMANA · 78%

The contemporary version of the same mechanism. Right-footed, plays wide on the left, drives inside with the carry, beats defenders by pace. Sulemana's documented top speed is faster than Kpardeh's — the same physical gap as Mané, at a smaller scale.

TERTIARY — BRUMA · 76%

The physical match is exact — 173cm / 70kg. But Bruma beats defenders with feints and jinking, not the ball carry. Same outer shell, different inside mechanism.

REFERENCE — COBI JONES · 74%

Carry-based speed forward. 170cm / 66kg. A correct historical reference. Cobi Jones's top speed was in the 19–20 mph band — the closest top-speed match in the pairing set.

DEMOTED — SHAUN WRIGHT-PHILIPS, NICO WILLIAMS

Feint-based wide forwards. Different mechanism inside the same outer archetype.

7 · GENEALOGICAL TREE

CHART 4 · CARRY-BASED LEFT-WING TRANSITION FORWARD LINEAGE

What the tree shows. The mechanism — receive wide, drive inside with the carry, beat by speed — defines the lineage. Cobi Jones is the closest *top-speed* match in the tree (19.5 mph). Mané is the mechanism apex but faster at 21–22 mph. The **Kpardeh → Mané pairing is a mechanism match, not a physical match** — this is now stated explicitly on the tree.

What was removed and why. Vardy, Owen, Mbappé and Defoe are central strikers. Removed. Shaun Wright-Philips and Nico Williams are feint-based wide forwards. Demoted. The pairing set now anchors on the carry-based mechanism alone.

8 · WHAT THE PAIRING ACTUALLY TELLS YOU

The primary finding. Kpardeh is a **carry-based left-wing transition forward** — a wide forward whose primary value is receiving on the left, driving inside with the ball under control, beating defenders by pace and ball carry (not by feints), and finishing 1v1 against the goalkeeper. The **Mané pairing at 84%** is the correct genealogical anchor because the mechanism is identical at every level.

The physical profile is now confirmed and the top-speed gap is now measured. 173cm / 68kg / right-footed places Kpardeh in the exact band as Mané (175cm / 69kg), Sulemana (175cm / 70kg), and Bruma (173cm / 70kg). But the top-speed data shows a **1.5–2.5 mph gap** between Kpardeh's peak (19.60 mph) and Mané's peak (21–22 mph). The mechanism matches; the physical ceiling does not.

The GPS data confirms the mechanism but not the speed. 8.56 m/s average max velocity (30.8 km/h / 19.15 mph) is solid at collegiate level but not elite. The 608m high-speed distance and 35 high-speed efforts per match confirm a physically active transition forward. But the top-speed number is the honest ceiling — **top-half of collegiate band, not the elite tier.**

The 5-goal consistency is the hard signal. Five goals in five matches — scoring in every game, one brace (FGCU, with a penalty), one game-winner (at American, away). That is a pattern, not a single-match peak.

The next level is the test. At NCAA level, Kpardeh beats defenders because he is faster than them (19.60 vs ~18.5 mph typical) and accelerates quickly. At Championship or Eredivisie level, the recovery speed of the defenders increases by 1–1.5 mph. The margin that produces the carry-based 1v1 at collegiate level compresses. Whether the acceleration and carry control compensate for the modest top-speed margin is the open question the file cannot answer.

The missing three matches are the file's gap. FGCU (brace), Georgia Southern (9 shots), and American (game-winner) are all in the video archive. They should be logged before any club conversation.
