

GABRIEL MEC

Gabriel Ferreira de Carvalho · Attacking Midfielder · Grêmio Porto Alegre
Brasileirão Série A · 17 years old · Porto 2026-27

✓ 12/12 METRICS · FGA 7.60 · ⚡ VERY GOOD

First fully complete file in the ESN series. 12 of 12 video metrics pass threshold. ~185 logged events across 7 registered matches. FGA_v3_Final activates. Tier 1 statistical layer now populated from Brasileirão Série A data. **The FGA rating of 7.60 is the highest provisional rating the ESN framework has produced — at 17 years old, in a top-10 global league.**

Four items still open before client delivery.

- 1 — **Match 8 is unregistered.** Events labelled M8 exist in the log but no Match 8 row in the register. Either register it or the events are mislabelled.
- 2 — **All events tagged "Positive indicator."** Anti-indicator category unused. Events scored 3–4 with clear failure descriptions must be re-tagged. Quality figures will rise; reliability figures will fall. Both changes matter.
- 3 — **COACH metric not scored.** 25% of the Lars framework and the only outstanding Tier 3 metric.
- 4 — **No second scout.** No blind cross-validation has been conducted.

1 · SUBJECT PROFILE

ATTRIBUTE	DETAIL
Full name	Gabriel Ferreira de Carvalho
Known as	Gabriel Mec
Position	Attacking Midfielder (has played LW)
Club (2025-26)	Grêmio Porto Alegre
Club (2026-27)	FC Porto — signed, no appearances yet
League	Brasileirão Série A · LOG 3.6
Age	17 (b. 2008)
Selection reason	ESN Pilot Player Youth
Evidence base	~185 events · 7 matches registered · 12/12 metrics
Analyst	Jim Totime · Opened 2026-07-29

2 · TIER 1 — STATISTICAL FOUNDATION 20% WEIGHT

2026 SEASON — SÉRIE A + CONTINENTAL

COMPETITION	MP	STARTS	MIN	GLS	AST	G+A	G/90
Série A	16	7	716	2	0	2	0.25
International (Libertadores)	8	—	436	1	1	2	0.21
All competitions	24	—	1,152	3	1	4	0.23

SHOOTING · POSSESSION · DISCIPLINE

METRIC	VALUE	PER 90	ASSESSMENT
Shots	13	1.63	Moderate-High
Shots on Target	3	0.38	LOW
SoT %	23.1%	—	PRIMARY STATISTICAL WEAKNESS
G / SoT	0.67	—	ELITE — CLINICAL WHEN ON TARGET
Fouls committed	9	1.13	Low
Fouls drawn	19	2.38	ELITE — 2.1:1 RATIO
Interceptions	8	1.00	Moderate
Tackles won	8	1.00	Moderate
Crosses	6	0.75	Low
Offsides	0	0.00	REFRAMES OBI_T DIAGNOSIS
Yellow cards	3	0.38	Controlled

CHART 1 · THE TIER 1 STORY — FOUR FINDINGS THE NUMBERS REVEAL

SHOOTING FUNNEL

SoT% 23.1% — the number that will concern clubs

G/SoT 0.67 — the counter-signal. Clinical when on frame

Diagnosis: shot selection and setup, not finishing.

FOUL RATIO

2.1 : 1

Defenders cannot legally stop him.

Fouls drawn is a leading indicator for attacking midfielders at senior level.

OFFSIDES

Reframes the OBI_T weakness

Video: 5 of 8 run timing events scored as "arrives too late" — not "too early."

Zero offsides confirms: arrival latency, not over-commitment.

Coachable. MARKET VALIDATION FC Porto signed Gabriel Mec for 2026-27. The market has already made its bet on his trajectory. This report does not argue his value — it measures his progress against the archetype Porto has invested in.

THE FOUR FINDINGS — EXPLAINED

- 1. Zero offsides changes the run timing diagnosis.** The video assessment flagged OBI_T at 6.50 — the weakest metric in the file — with five of eight events describing late or mistimed runs. The natural assumption is over-commitment. The stat contradicts it: **zero offsides in 8.0 90s**. The timing problem is *arrival latency*, not going too early. The coaching target is therefore "anticipate forward" — a much easier problem than the opposite.
- 2. The 19 fouls drawn are the real output signal.** A 2.1:1 draw-to-commit ratio at 17 in a top-10 league is exceptional. This corroborates the video evidence (multiple events describe defenders committing fouls because they cannot legally stop him) and produces a leading indicator that raw goal and assist totals miss.
- 3. Shot quality is the statistical weakness — but finishing is not.** SoT% at 23.1% is low. But G/SoT at 0.67 is elite. Two goals from three shots on target. The problem is shot selection and setup, not the final action. A development focus on "shoot from better positions" would directly improve output without any technical work.
- 4. The Porto move is already done.** Confirmed in the Tier 1 data. Gabriel Mec has signed for FC Porto for 2026-27 at age 18. The market has validated his technical foundation. Any pairing analysis in this report is therefore describing what Porto bought — not predicting it.

3 · TIER 3 — VIDEO EVIDENCE SCORECARD 50% WEIGHT

VIDEO COMPLETENESS

12 / 12

First fully complete file

EVENTS LOGGED

~185

Across 8 scored matches

TIER 3 AVERAGE

8.26

11 metrics · COACH pending

CHART 2 · FGA PROFILE — RADAR (12 TIER 3 METRICS)

How to read the shape. Each axis is one Tier 3 metric, scaled 0–10. The navy polygon is Gabriel Mec's profile.

What the shape says. A wide, near-symmetrical shape with one clean pull toward centre:

- **Elite cluster (8.80–8.94):** SPI, DYN, SII_A, CRS. Four metrics above 8.8 — the technical-creative-transition core.
- **Strong block (8.17–8.50):** CLM, CRK, CHR, OMS, SOA. Five metrics between 8.1 and 8.5.
- **Good block (7.58–8.00):** OBI_S, DMA.
- **The one weakness: OBI_T at 6.50** — the only metric below 7.0. Visible as the single inward pull.

At 17 years old, in a top-10 global league, this is a profile with no serious weaknesses apart from run timing. The shape is what an elite attacking midfield prospect looks like — except it is 12 months early.

CHART 3 · QUALITY VS RELIABILITY — THE FULL 12-METRIC MAP

Navy bar = Quality (positive-event average). **Gold bar** = Hit Rate (% of events positive). Sorted by Quality descending.

Note the framework caveat: *all events tagged positive in this file* — a corrected pass will show lower hit rates for the higher-volume metrics.

SPI	8.94 100%
DYN	8.88 100%
SII_A	8.82 100%
CRS	8.80 100%
CLM	8.50 100%
CRK	8.37 100%
CHR	8.36 100%
OMS	8.19 100%
SOA	8.18 100%
OBI_S	8.00 100%
DMA	7.58 100%
OBI_T	6.50 100%

The reliability column will change when the file is corrected. Currently every event is tagged positive. Once the failure events (scored 3–4 with failure descriptions) are re-tagged as anti-indicators, the hit rates for SOA, DMA, CRK, OBI_T and MCS will drop meaningfully. Quality will rise. The two-lobe structure of the profile — high execution, moderate reliability — will become visible.

FULL SCORECARD

METRIC	EVENTS	QUALITY	MATCHES	BAND
SPI — Spatial Performance	9	8.94	4	ELITE
DYN — Dynamism	4	8.88	3	ELITE
SII_A — Explosive Accel.	19	8.82	5	ELITE
CRS — Clutch Response	5	8.80	3	ELITE
CLM — Calmness	4	8.50	3	ELITE
CRK — Creative Risk	23	8.37	5	ELITE
CHR — Character	7	8.36	4	ELITE
OMS — Transition	8	8.19	5	ELITE
SOA — Speed on Action	34	8.18	6	ELITE
OBI_S — Space Architecture	12	8.00	5	STRONG
OBI_P — Positional Anticipation	9	7.83	4	STRONG
DMA — Decision Making	20	7.58	5	STRONG
SII_T — Top-End Speed	6	7.58	5	STRONG
SII_R — Recovery Sprint	6	7.17	3	GOOD
MCS — Mental Competence	11	7.09	5	GOOD
OBI_T — Run Timing	8	6.50	4	MIXED
OBI COMPOSITE		7.42	TRANSFER	—
SII COMPOSITE		7.97	TRANSFER	—

4 · INTEGRITY AUDIT

#	ITEM	IMPACT
1	Match 8 events exist; Match 8 not registered	DATA INTEGRITY
2	All events tagged "Positive indicator" — anti-indicator unused	QUALITY INFLATED
3	COACH metric not scored	TIER 3 INCOMPLETE
4	No second scout assigned	NO CROSS-VALIDATION
5	Position changes noted (AM ↔ LW) in punch list	FRAMEWORK GAP

5 · FGA RATING

FGA RATING

7.60

⚡ Very Good · top of band

TIER 3 (50%)

8.26

11 metrics verified

TIER 2 (30%)

~7.50

Partial — 5 of 9 computable

TIER 1 (20%)

6.10

Verified · senior output

$(8.26 \times 0.50) + (7.50 \times 0.30) + (6.10 \times 0.20) = 7.60$

CHART 4 · WHERE THE RATING LANDS

At 17 years old. Every other player in the ESN file series at 17 or under has scored below 7.0. Gabriel Mec scores **7.60** — top of the Very Good band, on the border of Excellent. The gap between him and the next-highest youth prospect in the series is significant.

LOG context: Brasileiro Série A sits at ~LOG 3.6 in the FGA framework — matched to Serie A, Bundesliga and Ligue 1. Any absolute rating must be read against that. A 7.60 at LOG 3.6 is not the same as 7.60 at LOG 2.0. This is a real top-flight rating, not a lower-league inflated figure.

6 · TACTICAL DNA PAIRING

Ronaldinho	84%
Neymar (Santos)	79%
Lucas Paquetá	76%

PRIMARY — RONALDINHO · 84%

The strongest pairing in the file and the correct genealogical anchor. Same club, same archetype, same stylistic mechanism, and the same debates.

FGA COMPONENT	GABRIEL MEC	RONALDINHO (GRÊMIO 1998–2001)	ALIGNMENT
Club of emergence	Grêmio	Grêmio	100%
Position	AM / LW	AM / LW / FW	96%
Style	Joga Bonito, backheel passes, feints	Joga Bonito — definitional	94%
SPI — Spatial intelligence	8.94	Elite	92%
SOA — Ball mastery	8.18	Elite	91%
CRK — Creative risk	8.37	Elite	90%
"For show" tendency	Flagged twice (M4)	Career-long	88%
Emergence age	17	18	96%
OBI_T — Run timing	6.50 (weakness)	Not flagged	71%

Why 84%: the Grêmio lineage is the anchor. Gabriel Mec is the first Grêmio youth product since Ronaldinho to show this specific combination — Brazilian flair, technical improvisation, spatial intelligence, willingness to attempt the difficult action. **The two are separated by 28 years and by the same stylistic profile. Why not higher:** Ronaldinho's peak compressed the "for show" tendency into output. Gabriel Mec has not yet done that.

SECONDARY — NEYMAR (SANTOS ERA) · 79%

The other reference for a young Brazilian AM who plays with flair as a primary mechanism. Both emerged at Brasileirão level at 17 with the same repertoire and prompted the same debate.

TERTIARY — LUCAS PAQUETÁ · 76%

The modern comparison — the player who succeeded by converting flair into output at the European level while retaining the work rate. Gabriel Mec's OMS (8.19) aligns.

7 · GENEALOGICAL TREE

CHART 5 · BRAZILIAN JOGA BONITO — ATTACKING MIDFIELDER LINEAGE

BRAZILIAN JOGA BONITO — ATTACKING MIDFIELDER LINEAGE

Three archetypes emerged from the Pelé / Garrincha generation. Only one leads to Gabriel Mec.

WHAT THE TREE TELLS YOU

The branch is specific, not general. Gabriel Mec sits on the Ronaldinho branch — not the Zico branch (pass-first) and not the Kaká branch (direct runner). Same club, same archetype, same stylistic mechanism. The Grêmio academy has produced three previous attacking players of note; only one shares this specific profile.

The two-question footer is a scouting deliverable, not decoration. Q1 (convert "for show" into output) and Q2 (anticipate forward) are the two variables that decide whether Gabriel Mec becomes a €40M player or a €5M player. Both are visible in the video file. Both are testable over the next 12 months. A club receiving this report sees that the analyst has identified the two things that matter and can track them.

Porto has already placed its bet. The market has validated the technical foundation. The tree is therefore describing what Porto bought, not predicting it.

8 · VALIDATION STATUS & REQUIRED ACTIONS

REQUIREMENT	STATUS
Minimum 5 matches registered	✓ 7 REGISTERED
≥2 matches vs top-third opposition	✓ 5
≥1 away match	✓ 2
≥1 match while losing	✓ 3
Video completeness	✓ 12 / 12
FGA_v3_Final activation	✓ ACTIVATES
Match 8 registration	✗ MISSING
Failure events re-tagged	✗ ALL POSITIVE
COACH metric scored	✗ MISSING
Second scout assigned	✗ NO

REQUIRED BEFORE CLIENT DELIVERY

- 1. Register Match 8.** Events labelled M8 exist. Either the match is registered or the events are mislabelled.
- 2. Re-tag failure events.** Events scored 3–4 with failure descriptions need anti-indicator tagging. Quality rises, reliability falls. Both changes matter.
- 3. Score COACH.** Requires live scout observation. It is 25% of the Lars framework.
- 4. Assign a second scout.** No pairing percentage should be finalised without blind cross-validation.

PUNCH LIST

#	ITEM	PRIORITY
1	Register Match 8 or correct the M8 labels	HIGH
2	Re-tag failure events as anti-indicators	HIGH
3	Score COACH metric	HIGH
4	Second scout for blind cross-validation	HIGH
5	Replace LinkedIn CDN logo with local or base64-embedded version	HIGH
6	Add position-change note (AM ↔ LW) to the framework	MEDIUM
