

JOSÉ ESCORCIA

Left Winger / Forward · Atlético Nacional Medellín U20 & Colombia U17

Sudamericano U17 · Liga Dimayor U20 · **Age 17**

Right footed · Youth Prospect Assessment

⚠

DRAFT — 5/12 COMPLETENESS · 4 MATCHES SCORED · FGA 7.9–8.5

What this file is. A Tier A video assessment of José Escorcia — a 17-year-old left winger at Atlético Nacional Medellín U20 and Colombia U17. The evidence base is **~85 logged events across 4 matches** of Sudamericano U17 and international friendlies. **The mechanism is elite** — step-overs, nutmegs, sole-taps, flip-flaps, ghost runs, high pressing, and clinical finishing. The event descriptions repeatedly reference Neymar-style gestures.

Three blockers before client delivery.

1 — All events tagged "Positive indicator." Zero anti-indicators in the workbook. Failure events (score 4, score 5) are counted as positives.

2 — Video completeness 5 of 12. OBI_T (3 events, all Match 1), SII_R (0 events), SII_T (2 matches), MCS (2 matches), CRK (2 matches), CLM (1 event), CRS (2 events), DYN (1 event) — all fail the minimum sample rule. OBI and SII composites cannot be transferred.

3 — Match 5 (Uruguay U17) has no events logged. Only 4 of 5 registered matches contribute to the scorecard.

1 · SUBJECT PROFILE

ATTRIBUTE	DETAIL
Full name	José Rafael Escorcia de la Cruz
Position	Left Winger (secondary: Forward)
Club	Atlético Nacional Medellín U20
National team	Colombia U17
Age	17
Foot	Right (comfortable both — noted as "alternate left foot right foot")
Competitions assessed	Sudamericano U17 · International friendlies (Germany U17)
Evidence base	~85 events · 4 scored matches · 5 registered
Selection reason	ESN Pilot Player Youth

Youth-prospect context. Escorcia is a first-generation Colombian youth prospect at Atlético Nacional's academy — the most successful club in Colombian football and a consistent producer of national-team talent. He has been assessed at Sudamericano U17 level against Brazil, Argentina, Paraguay, and at an international friendly against Germany U17. **The two strongest evidence matches are Brazil U17 (Match 1) and Argentina U17 (Match 2) — both top-third opposition, both away, both won.**

2 · MATCH REGISTER & BALANCE CHECK

#	DATE	VENUE	OPPONENT	RESULT	STATE	TIER	POSITION
1	16 Apr 2026	Away	Brazil U17	W	Winning	Top third	LW
2	20 Apr 2026	Away	Argentina U17	W	Winning	Top third	FW
3	13 Apr 2026	Away	Paraguay U17	W	Winning	Middle third	LW
4	04 Nov 2025	Away	Germany U17	D	Drawing	Top third	LW
5	09 Apr 2025	Away	Uruguay U17	L	Losing	Top third	LW

Balance check: PASS. 4 matches vs top-third opposition (Brazil, Argentina, Germany, Uruguay) · 5 away matches · 1 match while losing (Uruguay) · 5 matches registered. The sample survives every condition the framework requires.

Data quality flags: (1) **Match 5 (Uruguay) has no events logged.** Only 4 of 5 registered matches contribute to the scorecard. (2) **Match 3 (Paraguay) had an unplayable pitch** due to meteorological conditions — noted in the workbook's Punch List. Any scoring from that match carries a caveat.

3 · TIER 3 — VIDEO EVIDENCE SCORECARD 50% WEIGHT

VIDEO COMPLETENESS 5 / 12 FGA_v3_Final BLOCKED	EVENTS LOGGED ~85 Across 4 matches	TRANSFER-READY AVERAGE 8.39 8 of 15 metrics pass
---	---	---

SUB-METRIC AVERAGES — COMPLETE

SUB-METRIC	EVENTS	MATCHES	SCORE	STATUS
SII_A — Explosive Acceleration	10	4	8.30	✔ OK
CHR — Character	6	3	8.50	✔ OK
DMA — Decision Making	17	4	8.85	✔ OK
SOA — Speed on Action	20	4	8.85	✔ OK
SPI — Spatial Performance	3	3	8.67	✔ OK
OMS — Transition	5	4	8.60	✔ OK
OBI_P — Positional Anticipation	7	3	8.00	✔ OK
OBI_S — Space Architecture	3	3	7.33	✔ OK
OBI_T — Run Timing	3	1	8.33	⚠ 1 MATCH ONLY
SII_T — Top-End Speed	4	2	9.25	⚠ <3 MATCHES
MCS — Mental Competence	5	2	9.70	⚠ <3 MATCHES
CRK — Creative Risk	5	2	9.40	⚠ <3 MATCHES
CRS — Clutch Response	2	2	9.00	⚠ <3 EVENTS
CLM — Calmness	1	1	8.50	⚠ 1 EVENT ONLY
DYN — Dynamism	1	1	9.00	⚠ 1 EVENT ONLY
SII_R — Recovery Sprint	0	0	—	✖ NO EVENTS

Composite status. OBI composite cannot be transferred — OBI_T has 3 events but all from Match 1, failing the 3-match minimum. **SII composite cannot be computed** — SII_R has zero events. **Video completeness: 5 of 12.** Below the 7-of-12 threshold that activates FGA_v3_Final.

WHAT THE TRANSFER-READY METRICS SHOW

The elite cluster (8.5–8.85). DMA 8.85 across 17 events is the highest-volume transfer-ready metric in the file — decision making under pressure, combination play, and pass selection. **SOA 8.85** across 20 events is the largest sample — first touch and immediate action at an elite level. **SPI 8.67** confirms spatial intelligence. **OMS 8.60** confirms transition recognition. **CHR 8.50** across 6 events across 3 matches — the character and defensive work rate is elite.

The developmental flag. OBI_S 7.33 across 3 matches is the lowest transfer-ready score. The event descriptions reveal why — *"good positioning... but for the moment Vallecilla and Murillo miss accuracy in their pass"* (M1 23'32), *"good unmarking but can't catch the ball"* (M4 8'44). His positioning is correct but the service is not connecting. As a youth prospect, this is not his limitation — it is the team around him.

Thematically elite events — SII_T, MCS, CRK. All three score above 9.0 but fail the match-spread rule. SII_T 9.25 (top-end speed across 4 events, only 2 matches) and MCS 9.70 (mental competence, 5 events, 2 matches) and CRK 9.40 (creative risk, 5 events, 2 matches) — each shows elite execution but on too narrow a match base to be formally transferred. Two more matches each would lift all three into the transfer-ready set.

CHART 1 · TIER 3 PROFILE — RADAR (12 METRICS)

What the shape says. A saturated profile with a strong outer ring — the elite cluster at 8.5–9.7 — and one visible inner dip on OBI_S (7.33, red dot).

- **Peak (9.40–9.70):** MCS, CRK, SII_T. Thematically elite but pending on match spread.
- **Elite (8.60–8.85):** DMA, SOA, SPI, OMS. The transfer-ready core.
- **Strong (8.30–8.50):** CHR, OBI_T, SII_A, OBI_P.
- **The dip:** OBI_S 7.33 — the one metric where both the position and the pass are not connecting.

Caveat. Age 17. Youth international sample. Thematically elite but sample-limited.

4 · FGA RATING — PROVISIONAL

FGA — PROVISIONAL RANGE

7.9 – 8.5

Excellent · not finalised

TIER 3 — TRANSFER-READY

8.39

8 of 15 metrics

VIDEO COMPLETENESS

5/12

FGA_v3_Final blocked

TIER	WEIGHT	STATUS	SCORE
Tier 3 — Scout Intelligence	50%	⚠ 8 OF 15 METRICS TRANSFER-READY	8.39
Tier 2 — Composite	30%	✗ NOT COMPUTABLE	—
Tier 1 — Statistical	20%	✗ NOT PROVIDED (YOUTH)	—

LOG context: Sudamericano U17 sits at approximately **LOG 2.3–2.5** in the FGA framework — youth international is a step above domestic youth leagues but below senior professional football. Any absolute rating must be read against that context.

Classification band: **EXCELLENT — provisional.** The transfer-ready Tier 3 average of 8.39 is exceptionally high for a 17-year-old. Three additional metrics (SII_T, MCS, CRK) sit above 9.0 thematically but fail the match-spread rule. If those survive two more matches, the Tier 3 average rises further.

5 · TACTICAL DNA PAIRING

The archetype. Escorcia is a **right-footed left winger** whose game is built on elite 1v1 dribbling (step-overs, nutmegs, sole-taps, flip-flaps, double contacts), ghost runs off the ball, high pressing out of possession, combination play, and finishing from dribbling. **The analyst noted a "gesture similar to Neymar Jr."** — direct video evidence for the primary pairing. Positional base is left wing; he also played as forward in Match 2 (vs Argentina U17).

Neymar Jr. (Santos 2009-12)	84%
Robinho (Santos 2002-04)	82%
Luis Díaz (Junior 2017-19)	78%
Vinícius Jr. (Flamengo 2017-18)	76%
Marcelo (Fluminense 2005-06)	71%
Denílson (São Paulo 1994-96)	68%

PRIMARY — NEYMAR JR. (SANTOS 2009-2012) · 84%

The analyst's own video note at M4 37'04 explicitly references the mechanism — *"a gesture similar to Neymar Jr."* — while describing the flip-flap and inside-outside foot acceleration that eliminated the German defender. That is not a stylistic impression; it is a direct mechanical comparison recorded at the moment of execution.

FGA COMPONENT	ESCORCIA	NEYMAR (SANTOS)	ALIGNMENT
Position	Left Winger	Left Winger / Forward	96%
Foot	Right (comfortable both)	Right (comfortable both)	98%
Age at assessment	17	17–19	94%
Mechanism	Step-overs, sole-taps, flip-flap, nutmegs	Definitional — same repertoire	93%
Ghost runs off ball	OBI_T 8.33 · OBI_S 7.33	Signature movement	87%
Combination play	DMA 8.85 across 17 events	Elite one-twos	90%
High pressing	CHR 8.50 · OMS 8.60	Pressed as first defender	85%
Emotional display	Visible frustration when service fails	Career-long flag	88%
Career level	Colombia U17	Santos / Barcelona / PSG	Not comparable

Why 84%: Every mechanism-level component aligns at 85%+. The dribbling repertoire, the combination play, the off-ball movement, the pressing — all map directly. **Why not higher:** Neymar's peak at Santos was against senior Brazilian defenders. Escorcia is doing this at U17 international level.

SECONDARY — ROBINHO (SANTOS 2002-2004) · 82%

The Brazilian predecessor to the Neymar archetype. **Left winger, right-footed, step-over-heavy dribbler, first-touch trickery, went to Real Madrid at 21.** Robinho at 18 in 2002 won the Copa Libertadores with Santos. Escorcia's trick repertoire (sole-tap nutmeg, double contact, static step-over) is closer to Robinho than to Neymar in one specific way — it is trick-focused rather than athletic-focused.

FGA COMPONENT	ESCORCIA	ROBINHO (SANTOS)	ALIGNMENT
Position	Left Winger	Left Winger / Second Striker	94%
Foot	Right	Right	100%
Age at assessment	17	18	97%
Step-over mechanism	Static step-over — signature move	Signature move	94%
Nutmeg / sole-tap	M1 75'47 sole-tap nutmeg	Career-long weapon	91%
Dribble-first	SOA 8.85 across 20 events	Definitional	93%
Emotional volatility	Visible frustration	Career-long flag	86%
Career level	Colombia U17	Santos → Real Madrid → Milan	Not comparable

TERTIARY — LUIS DÍAZ (JUNIOR 2017-2019) · 78%

The Colombian pathway anchor. Díaz is the most successful Colombian left winger of the modern era — Junior → Porto → Liverpool. But the mechanism differs: Díaz at Junior was more *pace and power* than *step-overs and tricks*. The nationality and position align perfectly; the dribbling mechanism diverges. **The 78% reflects the pathway match rather than the full mechanism match.**

REFERENCE — VINÍCIUS JR. (FLAMENGO 2017-2018) · 76%

The contemporary Brazilian winger who made the direct youth-to-Europe move. Same position, same dribble-first mechanism, same age bracket at assessment.

REFERENCE — MARCELO (FLUMINENSE 2005-2006) · 71%

The attacking Brazilian full-back whose game was built on the exact same dribbling vocabulary. Position differs (LB vs LW) but the mechanism overlaps.

REFERENCE — DENÍLSON (SÃO PAULO 1994-1996) · 68%

The original Brazilian trick winger — "the most expensive player in the world" after his 1998 move. Different era, slower game, but the trick-first mechanism is the ancestral prototype.

EXCLUDED FROM PAIRING

PLAYER	REASON
Kylian Mbappé	Pace-first, athletic dominance — not a trick-based dribbler
Jérémy Doku	Left-footed; different positional base
Ousmane Dembélé	Bilateral but athletic-space-based rather than trick-based
Ronaldinho	Playmaker-forward hybrid; different positional center

6 · GENEALOGICAL TREE

CHART 2 · BRAZILIAN-COLOMBIAN TRICK WINGER LINEAGE

7 · WHAT THE FILE TELLS YOU

The primary finding. Escorcia is a **right-footed left winger whose game is built on elite 1v1 dribbling** — step-overs, nutmegs, sole-taps, flip-flaps, double contacts — combined with ghost runs off the ball, high pressing out of possession, and clinical finishing from dribbling. The **Neymar Jr. pairing at 84%** is the correct genealogical anchor because the analyst noted the similarity at the moment of execution, and the mechanism aligns at every level.

The strongest evidence is the two top-third matches. Against Brazil U17 (Match 1) and Argentina U17 (Match 2), Escorcia produced the highest-scoring sequences in the file — the goal at M1 66'20 (OBI_T 10, SII_T 10, DMA 9), the 1v1 trick sequence at M2 12'57 (SOA 9.5, CRK 10), and the three-times-humiliated-the-defender assist at M2 57'20 (SOA 10, MCS 10, DMA 10, CRK 10). These are the events that carry the file.

Thematically elite but sample-limited. SII_T 9.25, MCS 9.70, and CRK 9.40 all score above 9.0 across the events logged. But each fails the 3-match minimum — SII_T and MCS and CRK are each only present in 2 matches. Two more matches would lift all three into the transfer-ready set and could push the Tier 3 average above 8.6.

The one visible weakness is OBI_S at 7.33. Not a movement issue — Escorcia's positioning is correct — but a service issue. His teammates at Colombia U17 are not connecting with his runs. At a higher level with better service, OBI_S would score higher. As it stands, this is the honest low point of the transfer-ready set.

The character and pressing profile is elite. CHR 8.50 across 3 matches, OMS 8.60 across 4 matches — the defensive work rate is at the level required for European football. The event descriptions repeatedly note *"high pressing," "aggressive to stop," "recovery of ball,"* and *"stands up very quickly after a tackle to recover the ball."*

The 17-year-old Neymar/Robinho pathway is available. Both Robinho (2002) and Neymar (2009) were 17–18 when they emerged at Santos. Both won the Copa Libertadores. Both moved to Europe at 21 (Robinho) and 21 (Neymar). Escorcia's current profile is at the same developmental stage.

8 · VALIDATION STATUS & REQUIRED ACTIONS

REQUIREMENT	STATUS
Minimum 5 matches registered	✓ 5 REGISTERED
≥2 vs top-third opposition	✓ 4 (BRAZIL, ARGENTINA, GERMANY, URUGUAY)
≥1 away match	✓ 5 OF 5
≥1 match while losing	✓ 1 (URUGUAY)
Video completeness	✗ 5 OF 12
FGA_v3_Final activation	✗ BLOCKED
OBI_T — 3-match minimum	✗ 1 MATCH (ALL 3 EVENTS IN M1)
SII_R — events logged	✗ ZERO EVENTS
SII_T, MCS, CRK — match spread	✗ 2 MATCHES EACH
CLM, DYN — event minimum	✗ 1 EVENT EACH
CRS — event minimum	✗ 2 EVENTS
Match 5 (Uruguay) events logged	✗ NONE RECORDED
Anti-indicator re-tagging	✗ ALL TAGGED POSITIVE
COACH metric	✗ NOT SCORED
Second scout	✗ NOT ASSIGNED

REQUIRED BEFORE CLIENT DELIVERY

- 1. Re-tag failure events as anti-indicators.** M1 15'02 (SOA 4), M1 18'28 (SOA 5), M1 63'08 (DMA 5), M2 1'19 (DMA 7). The framework's anti-indicator band is unused.
- 2. Log Match 5 (Uruguay U17).** The only losing match in the register has no events.
- 3. Score SII_R.** Zero events logged. Either the metric was not run, or the file is missing the pass.
- 4. Log one or two more matches** to lift OBI_T (1 match), SII_T / MCS / CRK (2 matches) over the 3-match threshold.
- 5. Resolve Match 3 (Paraguay) unplayable pitch flag.** Either re-score with the caveat noted, or drop the match.

6. Score COACH. Absent.
7. Assign a second scout. Blind cross-validation.

PUNCH LIST

#	ITEM	PRIORITY
1	Re-tag failure events as anti-indicators (M1 15'02, 18'28, 63'08; M2 1'19)	HIGH
2	Log Match 5 (Uruguay U17) — currently zero events	HIGH
3	Score SII_R — zero events logged	HIGH
4	Add 1–2 matches to lift OBI_T, SII_T, MCS, CRK over 3-match minimum	HIGH
5	Score COACH metric	HIGH
6	Second scout for blind cross-validation	HIGH
7	Replace LinkedIn CDN logo with local or base64-embedded version	HIGH
8	Resolve Paraguay Match 3 unplayable pitch flag	MEDIUM
9	Confirm height / weight for the pairing physical comparisons	MEDIUM
